

The FN303™ less lethal launcher : a viable option to lethal force

The world is changing. Keeping the peace requires new tactics and equipment specifically designed for crowd control.

To meet these new requirements, FN HERSTAL now introduces the FN303 less lethal launcher. The first launcher to be fully developed around the "reduced lethality" concept, the FN303 allows neutralization and seizure of suspects with maximum effectiveness and minimum risk.

BENEFITS	
EFFICIENT	<i>Guarantees a maximum of effects on impact. The 29 J kinetic impact shock instantly stops the subject.</i>
DEDICATION TO LESS LETHALITY	<i>No confusion possible as the FN303 has been designed to shoot exclusively less-lethal projectiles..</i>
USER-FRIENDLY	<i>Easy to use, with little recoil, it allows faster reaction under stress.</i>
SHORT SAFETY DISTANCE (1m)	<i>Low risk of permanent injuries even at very short range.</i>
FLEXIBLE	<i>With its broad range of ammunition and accessories, it is a solution for any scenario where less lethal force is an option.</i>
BETTER ACCURACY	<i>Effective range = 50m Maximum range = up to 100m.</i>
INCREASES LAW ENFORCEMENT OFFICERS' SAFETY	<i>Possibility to control even multiple violent suspects while safely remaining out of reach</i>

Missions

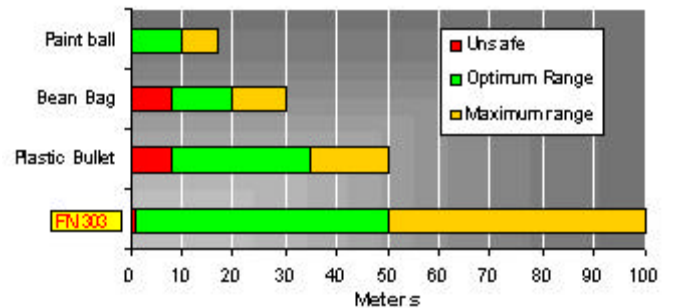

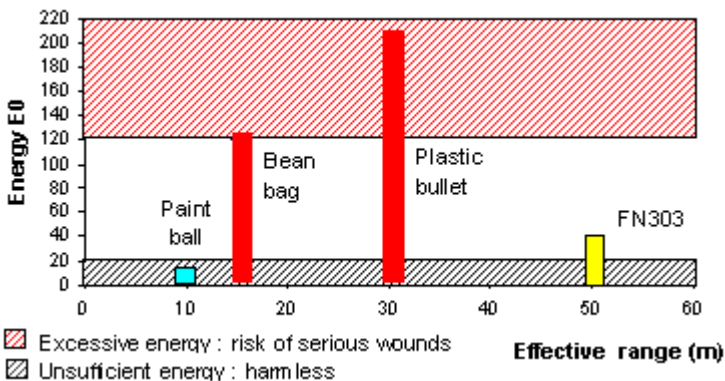

- Crowd, riot control
- Peace keeping in urban areas
- Keeping order in stadiums
- Marking of violent suspects
- Hostage rescue
- Prison cell extraction
- Area denial, saturation shots
- Barricaded suspects
- Unarmed aggressor
- Suicide by police
- Domestic violence

System Description

- Dissuasive looking semi-automatic, compressed air launcher
- Two translucent magazine that allows permanent check on remaining ammunition
- 200 Bar pressure bottle delivering 110 shots
- Two speed loaders
- Cleaning kit

A true compromise between accuracy, efficiency and safety

*The FN303 should be used according to rules and procedures described in the operator's manual.
Sales of this product are restricted to military and law enforcement agencies*

Projectiles

The projectiles have been designed especially to break up on impact, eliminating risks of penetrating injuries. Thanks to their fin stabilized design, the projectiles have an effective range of 50m with a much higher hit probability than any other similar product.

The primary effect is trauma : the shock (15J/cm³) directly neutralizes the aggressor. Secondary effects will be delivered by a chemical payload chosen according to the mission requirements

All .68" projectiles have a 8.5g weight, a polystyrene body and a granular non-toxic bismuth forward payload

Impact

Rear payload :
100% non toxic glycol base

Washable paint

Rear payload :
Fluorescent pink pigment
in non toxic glycol base

Indelible paint

Rear payload :
Latex based polymeric paint
Cleaning : water + soap

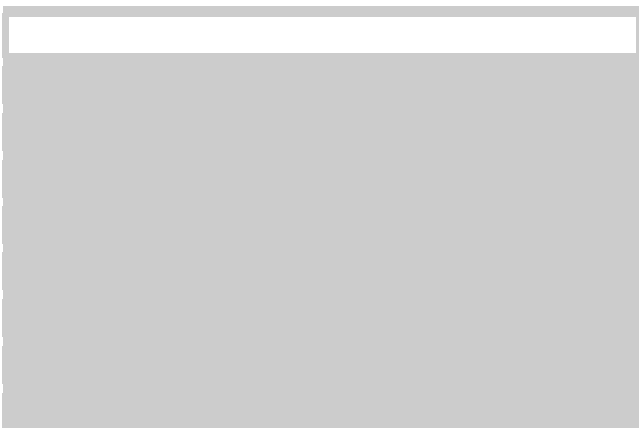

OC (Oleoresin Capsicum)

Rear payload :
Orange dyed non-toxic
glycol base + 5% OC

Soon available : Clear out (OC+CS), Illuminant,...

For safety reasons, never aim towards face, throat or neck. The FN 303 projectiles should never be used with another launcher.

The FN303 is also available as under-carriage version for most tactical rifles.
