**A SINGLE STAR ON  
TOP OF THE TREE  
GALAXIES  
UNDER IT**

[www.willbell.com](http://www.willbell.com)

**HOTECH** Empowered by Innovation

**New! Advanced CT Laser Collimator**

**Collimation Breakthrough**

- Collimates Your Cassegrain Telescope
- ▶ Without Using a Star & Tracking
  - ▶ Indoor or Outdoor, Day or Night
  - ▶ Focus Stays at Infinity
  - ▶ No Unstable Thermal Shadows due to Internal/External Thermal Turbulence
  - ▶ One-man Collimation
  - ▶ Portable and Simple to Setup and Use
  - ▶ Works for CT, SCT, Maksutov, & RC.

**New! SCA Field Flattener for Refractor**

- ▶ Fully Multi-Coated Two-Element Lens Design for f5-f8 Refractor Gives Sharpest Image Across the Entire Field
- ▶ Patented SCA Technology Provides Solid Connection and Centers Camera for Best Imaging Result
- ▶ Available in 2" Adapter

**SCA Laser Collimator** Patented

- ▶ Crosshair Laser for Easy Centering
- ▶ Innovative Self-Centering Adapter
- ▶ No Focuser Slop for Repeatable Installation
- ▶ External Targeting Grid Made Collimation Easy
- ▶ Ideal for Newtonian Telescope

**Astro Aimer** Patented

- ▶ Proudly used and preferred by Palomar Observatory
- ▶ Green Laser, Red & White Flashlights all in one unit

ACCESSORIES

**THE WORLD'S  
BEST FILTERS AND  
ASTRONOMICAL  
ACCESSORIES**

**PREMIUM QUALITY FILTERS**

**THE DEEP SKY FILTER** The BEST light pollution filter on the market today! Perfect for visual and photographic use.  
1.25" - \$99.95 • 2" - \$199.95  
Cassegrain Rear Cell - \$199.95

**THE ULTRA HIGH CONTRAST FILTER** The ULTIMATE dark sky nebula filter. Reveals the faintest of objects under both light polluted and dark skies.  
1.25" - \$99.95 • 2" - \$199.95  
Cassegrain Rear Cell - \$199.95

**THE OXYGEN III FILTER** Legendary performance allowing near photographic views of diffuse, planetary and extremely faint nebulae.  
1.25" - \$99.95 • 2" - \$199.95  
Cassegrain Rear Cell - \$199.95

**THE HYDROGEN-BETA FILTER** View extremely faint objects such as the Horsehead and California Nebulae. Ideal for use with 8" and larger telescopes.  
1.25" - \$99.95 • 2" - \$199.95  
Cassegrain Rear Cell - \$199.95

**THE NIGHT SKY HYDROGEN-ALPHA FILTER** A powerful photographic aid in over-coming light pollution during astrophotography of faint emission nebulae. Various sizes starting at \$79.95

**THE MINUS VIOLET FILTER** Produce pinpoint stars and greatly improve imaging by reducing chromatic aberration in lens systems.  
1.25" - \$59.95 • 2" - \$79.95  
58mm - \$89.95 • 72mm - \$99.95

**THE POLARIZING FILTER** Reduce glare and increase contrast on the moon and planets, as well as daytime objects. Also available in variable polarizing designs.  
Single 1.25" - \$29.95 • 2" - \$39.95  
Variable 1.25" - \$39.95 • 2" - \$49.95

**THE INFRARED BLOCKING FILTER** LUMICON's IR Blocking Filter is used for visible spectrum (RGB) astrophotography with cameras and CCD equipment.  
1.25" - \$69.95 • 2" - \$99.95

**LUNAR AND PLANETARY FILTERS** For increased contrast on Lunar and planetary details. Optimized for both visual and photographic applications. Visit [www.lumicon.com](http://www.lumicon.com) for uses.  
1.25" - \$19.95 • 2" - \$29.95

**MULTIPLE FILTER SELECTORS** Switch back-and-forth between filters without having to thread and unthread them from your eyepieces or diagonal. Leaving one of the slots open lets you compare views with and without your LUMICON filters. Made from solid aircraft aluminum. (Filters Sold Separately) 1.25" - \$129.95  
2" - \$169.95 • T-Thread Adapter for 2" - \$24.95

Visit [LUMICON.COM](http://www.lumicon.com) for a complete list of Superior Quality Astronomical Accessories and Photographic Equipment. TO ORDER: please call us or visit our website for a complete list of Authorized Lumicon Dealers worldwide. Prices do not include shipping and handling or state taxes where applicable.

### Are you PETERSON EQUIPPED?

- ① **GET-A-GRIP™** Ergonomic handles make your big Meade feel many pounds lighter. **\$71.99/pair**
- ② **EYEOPENER®** Get all the 2" eyepiece aperture that you paid for. Increase light reaching your pupil by up to 65% while eliminating vignetting. All Meade 10"-14" scopes. **\$74.99**
- ③ **2" TUBE ADAPTER** (not shown) shortens optical train by eliminating microfocuser **\$49.99**
- ④ **EZ FOCUS™ KIT** Precision bearings virtually eliminate focuser backlash. All Meade 7"-12" scopes. **\$29.99**
- ⑤ **MOUNTING ASSISTANT™** Greatly simplifies LX400/200/90 mounting. Compact & non-intrusive. **\$79.99**
- ⑥ **BUCK'S GEARS™** Improve tracking performance, adjusting drives while replacing plastic RA & DEC gears with precision steel gears. 7"-12" LX400 & LX200 scopes. **\$104.99** LX400 & 14" scopes **\$124.99**
- ⑦ **BUCK'S DRIVE TUNE-UP** Tools, parts & directions to achieve Buck's Gears precision on Meade 7"-12" LX200 & 400 already equipped with precision metal gears. **\$39.99**
- ⑧ **EZ CLUTCH™ KIT** Lightly tightening DEC clutch knob locks the most unbalanced LX400/200/90 **\$29.99**
- ⑨ **EZ BALANCE™** 3.3# on-axis counterweight for nose-heavy 10"-14" LX400/200/90 scopes. **\$41.99**
- ⑩ **TRIPOD SHRINK KIT** shortens giant field tripod. **\$49.99**

#### EZ BINOC MOUNT KIT

5-axis outdoor mount handles all size binocs. View standing, sitting or reclining. 10 sec setup. Kit contains all parts requiring machining, welding, drilling, tapping plus special parts. You supply inexpensive pipe sections readily available locally. **\$99.99**

# Where Have All the Aliens Gone?

*The problem of sustainability may explain the absence of extraterrestrials.*

FOR AGES, HUMANITY has looked to the skies and pondered whether intelligent life ever developed elsewhere. In 1950 physicist Enrico Fermi made a back-of-the-envelope calculation to estimate the time required for a technological civilization to spread throughout our galaxy. Fermi realized that a civilization expanding exponentially at even 1% of light speed could colonize the entire galaxy in just 10 million years. Following his reasoning, we now know that the Milky Way Galaxy is approximately 10 billion years old, whereas life on Earth arose around 4 billion years ago. Plenty of time has elapsed for intelligent life to develop elsewhere. So if any technological extraterrestrial society exists, then they should have visited us by now. Known today as the *Fermi paradox*, this apparent contradiction between observations and expectations raises the question: Where are they?

Many explanations have been proposed to account for the conspicuous absence of extraterrestrials. Perhaps life as found on Earth may be a cosmic anomaly that only arises once or twice in an entire galaxy. A more cynical perspective maintains that civilizations inevitably destroy themselves, facing nuclear winter rather than interstellar domination. Then again, members of an extraterrestrial galactic club could already be observing us, following a Prime Directive to remain hidden until they deem us worthy of contact.

We revisited Fermi's original assumption that civilizations spread exponentially throughout the galaxy. For example, a

civilization that deploys colonists to 10 planets, each of which expands to another 10 new planets, will quickly colonize the entire galaxy. This premise is based on observations of the human population, such as our growth from about 1 million

civilization may collapse. This could also explain the absence of extraterrestrials: despite the seeming vastness of the galaxy, perhaps exponential expansion is also unsustainable on a galactic scale.

If this *Sustainability Solution* explains the paradox, then rapidly expanding civilizations face severe issues upon complete colonization of the galaxy. With no new available resources and no room left to grow, unsustainably growing galactic civilizations may inevitably collapse. Because this process occurs over millions of years — compared to the multi-billion-year history of the Milky Way — if any extraterrestrial civilization successfully expanded through the galaxy, we would not have seen any signs of them. Their rise and fall would have been too quick for us to notice. We may be able to detect the aftermath of their expansion and collapse, but such “civilization graveyards” would escape our notice much more easily than the civilizations themselves.

The galaxy may be filled with sustainably living extraterrestrials that grow within the carrying capacity of their environment, expanding too slowly to have yet reached Earth. But if unsustainable rapid growth led to the demise of past galactic civilizations, then perhaps the challenge rests with human civilization to become responsible consumers and ensure our own long-term survival. ♦

DAN PAGE

to nearly 7 billion people over the last 10,000 years. But we are now learning that, despite the seeming vastness of Earth's resources, this rapid expansion frequently proves unsustainable because it consumes resources faster than they are replenished. If growth outstrips resources, human
