Improving Lives Around the World Through Contec Technologies

Contec established its expertise in highly reliable technology with electronic devices for factory automation. Leveraging this knowledge and proficiency, we have expanded into environment & energy, healthcare, and digital signage industries. We strive to improve your daily life through creative technologies and products.

Our Management Philosophy

Contribute to society with creative technology and products

Edge Computing

Proprietary Development Technologies Designed for a Wide Spectrum of Industries

Contec designs, develops and manufactures highly reliable, long-life and rugged industrial computers. Leveraging our expertise in the Factory Automation (FA) industry has allowed us to expand our business and quality product offerings to the growing Information and Communication Technology fields, including digital signage, healthcare, and energy.

CONTEC Craftsmanship

Contec's comprehensive quality assurance framework defines specific quality requirements to deliver unsurpassable reliability without sacrificing performance or usability. For example, our products must pass more than 500 checkpoints, developed over 30 years product development experience. At Contec, quality is synonymous with reliability. This means much more to us than simply catalog specs or performance figures. We know that for our industrial customers, reliability is the single most important factor when choosing their technology.

True Performance Indicator: 0 to 50 °C Guaranteed

Pitfall of "Operating Temperature" Indication

Operating temperature is one of the product performance indicators. Did you know that there are no uniform testing standards for industrial technology? Each manufacturer establishes its own performance test procedures and standards. You cannot see actual product performance differences by just checking the value range of the performance indication in basic specifications. In Contec's standard, indicated values are those measured in no-wind condition, which is a very severe environmental condition. At Contec, we believe that performance standards are insignificant unless they are rigorously tested in the most extreme industrial conditions.

Performance test with ventilation from the outside minimized with an acrylic board

Operating temperature range between 0 to 50 °C is achieved

This performance indication is equivalent to

In thermostat bath test with ventilation

0 to 60 °C

In simple surface temperature measurement

0 to 65 °C

Quality Begins with Parts Selection

An industrial computer is composed of many electrical components, such as a CPU. Proper selection of high quality components is a decisive factor for the reliability of the final product. Parts must be meticulously selected based a deep understanding of how the product will be used and the conditions under which it must perform. When it comes to the quality and reliability of industrial box computers, we are meticulous in our attention to detail at every stage of part selection:

- CPU and chipsets for embedded devices
- Highly durable SLC chip types
- High performance battery with 10-year life cycle
- Highly reliable capacitors for each unit

BX-T1000 Series

Fanless Embedded Computer - BX series

Features

- Intel 7th Gen. Core i7, Core i5, or Celeron processor
- Fanless design reduces maintenance
- Wide range of power supplies supported (10.8 to 31.2VDC)
- Rich peripherals support a wide variety of IO interfaces
- Retention fittings and cable clamps keep cables secure and minimize disruptions
- For Windows 10 IoT Enterprise installed model, the WF function of OS is supported.

Fanless Embedded Computer - BX series

Backside

Features

- Low running cost with extreme energy efficiency
- Ultra-small form factor – about the size of a paperback book
- Slitless/fanless design prevents ingress of dust and grime to reduce maintenance
- Rich peripherals support a wide variety of extend interfaces including dual monitor (DVI & DP) and two CFast card slots
- Built in remote power management reduces operational activities to increase energy efficiency
- Built in monitoring function for improved reliability of industrial equipment
- Retention fittings and cable clamps keep cables secure and minimize disruptions

BX-825 Series

Fanless Embedded Computer - BX series

Features

- 3 Gigabit LAN ports interconnect differing network hierarchy
 - Supports a wide range of temperatures with operations guaranteed from 0 to 55°C*1
 - Slitless/fanless design prevents ingress of dust and grime to reduce maintenance
 - Wide variety of power supplies supported (9.6 to 31.2VDC) supported.
- *1 This specification applies when forced air cooling is used. Derating may be necessary depending on the usage environment.

*2: Use a power cable shorter than 3m.

*3 Use a cable less than 3 meters to connect to USB 2.0 I / F.

*4 The noise resistance test, withstand voltage test, and isolation resistance test are conducted by connecting the PoE power unit "POW-CB60AT" (optional item). This standard is applicable for the BX-R100 main body only. Use a power supply that conforms to EN50155.

Options

17 types of CONPROSYS I/O modules
Analog input, Analog output, Digital input, Digital output, Digital I/O, Serial Communication, Counter, etc. (Refer the Industrial IoT chapter for details)

Model		CPS-BXC200
System	CPU	Intel® Atom® Processor x7-E3950 1.6 GHz
	BIOS	BIOS (mfd. by AMI)
	Memory	204pin SO-DIMM socket x 1, PC3-12800(DDR3L 1600) ECC, 4GB or 8GB
Graphic controller		Intel® HD Graphics 505 (built into CPU)
Storage Slot		1 slot, M.2 2242, SATAIII. M.2 card (pSLC) equipped: 32GB*1 or 64GB*1
Interface	Display	1x Analog RGB (15-pinHD-SUB connector), 1x DisplayPort
	CFast	1x CFast CARD Type I, bootable
	LAN	3x 1000BASE-T/100BASE-TX/10BASE-T (Wake On LAN support)
	USB	3x USB3.1 Gen1 (USB3.0) (TYPE-A)
Serial		1x RS-232C
Hardware monitoring		Monitoring CPU temperature, power voltage
RAS		1 port (3.81mm pitch 6-pin)
Watchdog timer		Software programmable, 1sec to 255sec (Time up allows reset or shutdown).
RTC/CMOS		Lithium battery backup battery life: 10 years or longer. The real-time clock is accurate within ±3 minutes (at 25°C) per month. (CPU built-in RTC).
Expansion		Up to 8 CONPROSYS I/O modules can be stacked through the Contec developed stack bus *2
Rated input voltage		24VDC (±10%)
Power consumption(Max.)		24V 1.5A (USB I/F, without stack bus power) 24V 4.8A (USB I/F, with stack bus power)
Operating temperature		-20 to 60°C/-4 to 140°F (-20 to 55°C/-4 to 131°F when operating 1000BASE-T)
Operating humidity		10 to 90%RH (No condensation)
Storage temperature		-20 to 60°C/-4 to 140°F
Physical dimensions (mm/inch)		76.0/2.99(W) x 94.0/3.70(D) x 124.8/5.06(H) (No protrusions)
Weight		About 1.1kg/2.43lb (Excluding attachment fittings)
Installation method		Quick mounting on the 35mm DIN rail
Certification EMC safety		VCCI Class A, FCC Class A, CE Marking (EMC Directive Class A, RoHS Directive)
Software operating support		Windows 10 IoT Enterprise LTSB 2016 64bit (Ja/En/Cn/Kr)

*1: The capacity of SSD is a value when 1GB is calculated by 1 billion bytes. The capacity that can be recognized from OS might be displayed fewer than an actual value.

*2: The total power consumption of stack bus I/F should be less than 24VDC 3.3A.

BX-320 Series

Fanless Embedded Computer - BX series

Features

- PCI Express cable port equipped
- Supports Windows 10 IoT Enterprise and Windows Embedded Standard 7
- Completely spindle-free design
- Small, palm sized design supports many types of peripherals
- Can also be a Contec's F&EIT Series controller to connect up to 8 I/O modules.

BX-M1000 Series

Fanless Embedded Computer - BX series

Features

- 7th Gen. Core i5, Celeron processor adopted
- Slitless/fanless design prevents ingress of dust and grime to reduce maintenance
- Expansion slots to hold PCI bus boards (Type with Expansion Slot).
BX-M10x0P2 has two PCI slots.
BX-M10x0P4 has one PCI-Express(x4) slot and three PCI slots.
- Retention fittings and cable clamps keep cables secure and minimize disruptions.

Specifications

Model		GMB-AC2460-LLVA
System	CPU	Intel® 8th / 9th Gen. Core™ Processor (LGA1151)
	Chipset	Intel® C-246 with CoffeeLake Refresh-S
	BIOS	AMI UEFI BIOS
	Memory	Up to 64GB in 4 slots 288-pin DIMM sockets. Supports dual channel DDR4 2400/2666 MHz SDRAM.
	Security (TPM)	TPM2.0
Graphic controller		Intel® Gen 9 graphic engine supports DirectX 12, OpenGL 4.5 Intel® UHD 610 & 630 graphics (by processor)
Storage Devices		6x SATA 3.0 (6Gb/s) ports
Interface	Display	1x VGA Port, 1x DisplayPort, 1x HDMI Port
	Audio	1x Line-in, 1x Line-out, 1x Mic-in (Rear I/O)
	LAN	2x 1000BASE-T/100BASE-TX/10BASE-T (Wake On LAN support) (Rear I/O)
	USB	4x USB 3.1 (Gen2) ports (Rear Panel), 2x USB 2.0 ports (Rear Panel) (TYPE-A) 2x USB 3.1 (Gen1) ports with pin header on board, 4x USB 2.0 ports with pin header on board
	Serial	1x RS-232C/422A/485 (Rear Panel), 5x RS-232C with pin header on board
Hardware monitoring		System monitor (Voltage, Fan Speed and Temperature)
Watchdog timer		Programmable by embedded controller
Expansion		1x PCIe (x16) (Gen3) slot, 3x PCIe (x4) (Gen3) slots, 3x PCI slots 1x M.2 Key-M (2242/2280) slot (PCIe x2)
Power supply		ATX 24-pin power connector, 12V 8-pin power connector
Operating temperature		0 to 60°C/32 to 140°F
Operating humidity		5 to 95%RH (Non-condensing)
Storage temperature		-40 to 80°C/-40 to 176°F
Physical dimensions (mm/inch)		304.8/12.0 x 243.84/9.6(No protrusions)
Certification EMC safety		FCC Class A, CE Marking (EMC Directive Class A, RoHS Directive)
Software operating support		Windows 10 2019

VPC-700 Series

Automation Computer

Features

- Compatible with Intel® Core™ processor series Skylake
- Compact size for easy installation in small areas
- Removable storage
- Supports mirroring (RAID1)
- Supports key peripherals with rich interfaces including 1x VDI-I, 1x DHMI, 1x DisplayPort, 1x Low profile size PCI Express (x16) slot, 3x Giga LAN, etc.

*1: Accuracy is within the error of 1.5% for the periphery of the touchable area, and the other areas are within 1%.

*2: When using Windows 10, the mouse cursor is not displayed if the mouse device is not connected. The virtual mouse driver is required to display the cursor. Please download it from the CONTEC website.

*3: The capacity of CFast is a value when 1GB is calculated by 1 billion bytes. The capacity that can be recognized from OS might be displayed fewer than an actual value.

*4: Use a power cable shorter than 3m.

*5: Ensure that the total current for the USB port power supply capacity and the expansion board power supply capacity (5V) is 2.4A or lower.

When using a total current 1.9 A or higher, be careful of the ambient temperature.

*6: The maximum power for an expansion board that can be equipped is 7.5 W or lower.

PT-970 Series

Desktop Touch Panel Computer

Display panel folded

Features

- Installable computer with desktop-type touch panel
- Safe even if power is interrupted. UPS backup power supply, OS automatic shutdown function
- Abundant expansion interface matched with device incorporation
- Slitless/fanless design prevents ingress of dust and grime to reduce maintenance
- Built in remote power management reduces operational activities to increase energy efficiency
- Supports a wide range of power supplies (10.8 to 31.2VDC)

Examples of CONPROSYS Usage

APP 1 Supporting Process Reform in Manufacturing Industries. Initiative of Industrial 4.0

IoT-based Factories

CONPROSYS IoT devices have a built-in OPC UA server function. This makes it possible to use a SCADA system equipped with OPC UA client function to visualize the operating status of machine equipment. By making use of the open technology that complies with international standards and that is proposed by CONPROSYS, it is possible to carry out future investments in a scalable manner and with no waste such as by using MES/ERP linking to optimize supply chains and by implementing mass customization that uses the IoT.

APP 2 Adding New Value to Businesses with Simple Cloud Services

Manages Infrastructure Facilities of Multi-locations

The CONPROSYS can be used to quickly construct work systems that make use of cloud technology to manage the operation of and perform predictive maintenance in multiple locations. CONPROSYS Cloud Data Service 2, a cloud service for data management, can be used to perform data linking with external machine learning and analysis tools by way of an API. CONTEC is your one-stop solution provider for everything from IoT devices to server management.

APP 3 CODESYS, a Sequence Control Software Using Open Technology

Forward to the Global Factories of the Next Generation

With the CONPROSYS PAC Series, it is possible to develop programs using an international-standard language that complies with IEC 61131-3. This makes it possible to apply PLC development technology to a variety of fields. The built-in web monitor function makes it possible to easily visualize data.

Varied Functionality of CONPROSYS

Built-in application functions that can be used to easily implement an IoT environment for collecting and storing data from sensors and controllers. Data can be processed, controlled, and visualized with intuitive operations from a web browser.

CTR M2M Controller series GW M2M Gateway series PAC PAC series

CONPROSYS VTC (Visual Task Control)

CTR GW PAC

Drag function icons from the tool box to the grid area. A variety of task processing can be added with these intuitive operations. There is no need for knowledge of programming languages or for a special development environment. A variety of tasks such as device I/O, calculations, flow control, character string operations, cloud data transmission, and file operations can be set easily from a web browser in the same manner as drawing a flow chart.

Up to 30 kinds of function-icons support you scripting easily

Up to 20 main tasks and 10 subtasks are supported

Data linking with CONPROSYS HMI

Easy Processing and Control

Device setting, data saving, and script debugging are completed with a Web browser

Support multiple platforms (Windows, Android, iOS, MAC, Linux)

Drag function icons from tool box to the grid area

Set the function icon in property area

Test the script in the debug window

CONPROSYS VTC is easy and convenient

Sample Programs of Task Script Language for Monitoring and Controlling Routines

We have released some routine VTC sample programs in our HP that are used in monitoring and control processing, such as self-holding circuit, seven-segment display etc.

CONPROSYS HMI (Human-Machine Interface)

CTR GW PAC

Simply arrange the prepared display components to monitor the status of the input signals. Screens can be created with a web browser. There is no need for knowledge of programming languages or for a special development environment. Just drag the prepared display components to create screens. Furthermore, the properties area window is used to configure display component settings and to set the linking of data with sensors and devices.

Creating screens with a variety of prepared display items

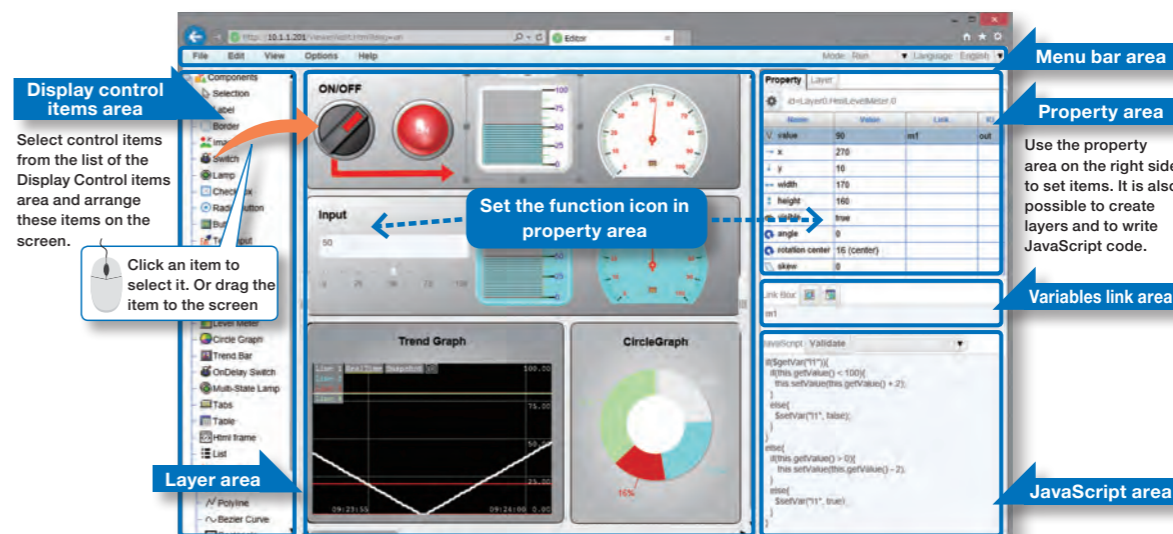

Data linking and checking can be performed at the same time as editing the screen

Data Capitalization

Data Transmission

Easily transmit data over mobile wireless Internet

Supports both Internet and 3G Mobile Wireless Internet. Data transfer is set easily by simply entering the server's address.

Supports OPC UA Standard

The data collected is easily displayed on SCADA and HMI systems adding monitoring capability to these systems. With the simple installation of merely connecting devices, SCADA systems can be used to monitor existing facilities that could not be monitored up to now.

Connectivity

Modbus Master

Simple settings make it easy to collect data with limited programming

Supports multiple interfaces

Easily configure, collect, measure and monitor data with different communication devices.

PLC Master

Simple settings make it easy to collect PLC data with limited programming

Batch collect data from multiple equipment sources

Supports multiple interfaces

Supports multi-vendor PLCs

Easily connect to a variety of PLC devices to collect and monitor data.

Supported PLC manufacturers: Mitsubishi Electric / Omron / JTEK Corporation, Panasonic / KEYENCE

MTConnect

MTConnect is a communication protocol for machine tools. It has been standardized by the MTConnect Institute.

The CONPROSYS has built-in MTConnect Adapter and Agent, which makes it possible to be used from Client software that supports MTConnect.

* The CONPROSYS signals that support MTConnect are digital inputs and outputs, analog inputs and CNC serial communication data.

Modbus Slave

The slave responds to data requests and returns the acquired information or the results of calculations.

In the case of a write request the corresponding part of memory is changed to the specified value

Responds to the data request of host communication device which is built-in the Modbus master function and returns the acquired information, calculation results, etc. Just several simple settings makes it possible to communicate with the host device. It can be used as a remote I/O device.

Signal Input and Output

CONPROSYS supports a wide range of equipment with interfaces for analog and digital signal input and output. CONPROSYS is available in integrated and configurable models. The integrated type is an all-in-one device. The configurable type offers a high degree of expandability.

CNC Communication

Collect information such as output messages and indicator light status from the CNC and send the data to the host system (MT-LINKi) etc. This makes it possible to add Ethernet communication function to old model machine tools that are not have equipped with external communication means.

* Data communication may not be possible with some machine tools and CNCs. Contact us for details.

Rich Variety of Interfaces and Excellent Lineup

M2M Controller series

The M2M Controller Series consists of two types of controllers: a stand-alone integrated type and an I/O interface expandable configurable type. The system is adaptable to a wide variety of locations, wiring methods and number of I/O channels. You can build a custom control and monitoring system to meet your specific needs.

Integrated Type

The integrated type offers a wide range of models with a variety of I/O interfaces and communication protocols.

[Key Features]

- DIN rail or fixed mounting options available
- Embedded CPU
- Operating temperature range: -20 to 60°C (-4 to 140°F)
- Durable hardware reduces maintenance costs
- Daisy-chain connections do not required a HUB (Except some models)
- Power supply voltage: 12 to 24 VDC
- Physical dimensions: 188.0(W)x78.0(D)x30.5(H) mm (7.40"x3.07"x1.20") (does not include protrusions and antenna)

OPC UA server built-in model

CPS-MC341-ADSC1-931

OPC UA server is built-in the firmware. It can directly communicate with an Information network without a bridge PC

FANUC MT-LINK⁺ enabled

Configurable Type

The configurable type allows users to add a variety of I/O modules to a CPU controller providing ultimate flexibility.

Refer pages 6 to 9 for icon definitions

[Key Features]

- Capable of supporting up to 16 I/O modules on a single controller
- DIN rail mountable
- Embedded CPU
- Operating temperature range: -20 to 60°C (-4 to 140°F)
- Durable hardware reduces maintenance costs
- Daisy-chain connections do not required a HUB
- Power supply voltage: 24 VDC

Multi-vendor Compatible PLC to IoT

M2M Gateway series

A single CONPROSYS controller can collect data from multiple PLC controlled equipment. M2M Gateway series supports devices from a variety of vendors, including Mitsubishi's MELSEC series, Omron's Sysmac series, JTEKT's TOYOPUC series, Panasonic series and KEYENCE series.

Monitoring PLC Device Memory

- Reads data from PLC memory (I/O status, data register, link register, file register, etc.)
- Transmits collected data to the cloud through simple settings.
- It is possible to communicate with the PLC at an arbitrary timing by setting the communication attribute and using the VTC function

Link up to 10 Systems and 100 Register Groups

Connect up to 10 PLCs using an Ethernet connection or up to 30 PLCs using a serial connection. Connect up to 100 register groups to collect up to 10,000 points of data.

	Power supply voltage	12 to 24VDC			

*1 SIM card not included. Standard size SIM card only. Visit www.contec.com for details.
 *2 Opto-isolated input (supports sink output). Built-in 12VDC power. *3 Counter inputs share with digital inputs.
 *4 The LAN ports are independent, which makes it possible to split the network segment.
 *5 Opto-isolated inputs (supports both current sink output and current source output). Built-in 12VDC power or external 12 to 24VDC power is switchable.
 *6 Transmittable signals by MTConnect are the collected data through the gateway module's interfaces, and the serial communication data with the CNC.
 * The specifications are supported by the newest firmware drivers. Please download the newest firmware from Contec website when you need.

Supports Multiple PLC Devices and Modbus Equipment from Different Vendors

Compatible with Mitsubishi MELSEC-FX / -A / -Q / -L / iQ-F / iQ-R series, Omron Sysmac C / CPM / CS / CJ / CP series, JTEKT TOYOPUC PC10G-CPU series, Panasonic FP7 / FPΣ / FP-X / FP-X0 series / Eco-POWER METER, and KEYENCE KV-3000 / KV-5000 / KV-7000 / KV-8000 / KV Nano series. Communicates with a variety of Modbus equipment.

Please visit our website for the latest information regarding supported PLCs and Modbus devices.

An innovative IoT solution for measuring motor insulation deterioration during operation
Three-phase Motor Insulation Deterioration Monitoring Module + ZCT Sensor

Model	The Measured Circuit	No. of measured circuit	Inner diameter of ZCT	Measurement voltage range	Measurement leakage current range (Resolution: 0.001 mA)	Measured insulation resistance range	Controller series
CPS-MM-LC	Overall equipment measurement (power supply mode) / Inverter output section measurement (inverter mode) AC servo amplifier output measurement (inverter mode)	1ch	Φ25mm (Φ0.98")	Phase voltage 10 VAC or more, 600 VAC or less	Overall equipment measurement: 0 to less than 1A Inverter output section measurement: 0 to less than 100 mA AC servo amplifier output measurement: 0 to less than 100 mA	Less than 1,000MΩ	CTR

* Supports inverters and AC servo amplifiers that supply low-voltage, three-phase power. * The guaranteed accuracy range is less than 10 MΩ
 * DC servo motor, and equipment that use single-phase power supply are not supported. Please contact us for large diameter ZCT of 25Φmm or more.

Modes-IO This module also features "Modes-IO" patented technology from Tanashin Denki Co., Ltd. that can be used for measuring leakage current resistance component (I_{0r}) from operating motors with high precision.

Eliminates the need to stop equipment for inspections

This module measures leakage current resistance components (I_{0r}) from operating motors with high precision. It changes the maintenance work to constant monitoring and contribute to the improvement of the equipment operation rate.

Shipped with a ZCT (Φ25) sensor for up to 30kW low-voltage, three-phase motors and AC servo motors.

This module supports three-phase delta connections and three-phase Y connections. It can be applied to a wide range of devices such as pumps, compressors, A/C fans, metalworking machines, and transport equipment.

Supports devices that acts without using a PC. Supports cloud service.

This module supports M2M controllers with built-in IoT functions such as data collection, web monitoring, and cloud linking. It can also be operated without a PC.

Flexible systems can be constructed by using in combination with the various functions of M2M controller CPU modules.

Image of connected with a M2M controller

Monitoring display example using CONPROSYS HMI

Threshold values can be changed temporarily.

Displays the insulation resistance values of the measurement results.

Displays the judgements of the threshold.

CONPROSYS HMI makes it possible to view equipment information on a Web browser without using a cloud server or similar device. This monitoring display example can be downloaded free-of-charge from the "Script sample programs" page of our company's website. Target sample software: "Sample software for three-phase motor insulation deterioration monitoring module"

Hourly insulation resistance graph display for the day

Example of System Configuration

- Detects insulation deterioration on the inverter output side, where measurements are known to be difficult
- Two measurement modes (power supply mode, inverter mode) for various measurement targets

Wiring

Enter into the IoT Era with a Real Time Controller IPAC series

IEC61131-3 standard CODESYS programming. Rich functionality to build an open system.

Web monitoring function using built-in CONPROSYS HMI

CONPROSYS PAC series includes a web server function and web screen creation software. Monitoring screens can be developed in a user friendly web browser environment. Devices can be monitored through a web browser without the use of a cloud server. No programming experience required.

Fieldbus master function

The built-in customized CODESYS Runtime engine supports EtherCAT / Modbus TCP master functions. In the CODESYS integrated development environment, fieldbus I/O can be directly assigned to variables in the same manner as the built-in I/O of a PAC integrated controller and the attached I/O of a PAC configurable controller.

Built-in OPC UA server for SCADA/MES/EPR linking

The built-in OPC UA server provides the ability to embed the CONPROSYS PAC series controller into a host SCADA system or other applications that support OPC UA protocol.

EtherCAT Slave Unit CPS-ECS341-1-011

EtherCAT slave unit

EtherCAT features allow the I/O modules to be controlled from a distance. Up to 16 I/O modules can be stacked to one slave unit.

Daisy chain connection

Each slave unit is equipped with an input port and an output port. Up to 65,535 slave units can be connected to one master. An MDP standard supported master controller will automatically recognize and register the I/O modules that attached on this EtherCAT slave unit.

*Common features are same as configurable type M2M controller series. Refer P56 for details.

IoT Cloud Services Evolve Data Utilization

CONPROSYS CDS2 (Cloud Data Service 2)

(This service is only for the Japan market)

Stores collected data of M2M Controllers and M2M Gateways. The stored data can be viewed and downloaded from a web browser. Contec provides a cloud service that can link with external servers to support our customers from a startup IoT system to large-scale systems.

- Data Storage and Visualization with Simple Settings
- User Management such as Limiting Viewing Ranges
- Possible to Display Information of Multiple Devices on a Single Graph

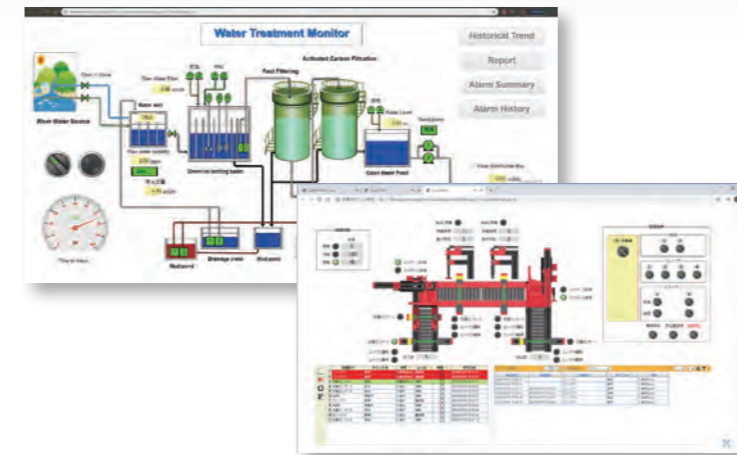

- Provided at a low price and with a simple plan
- Easily implement IoT cloud services
The collected data can easily be transmitted to and stored on cloud servers.

- A fully functional trial version is now available!

Web HMI/SCADA Software

CONPROSYS HMI System (CHS)

- Real SCADA realized by Web system
- Support CONPROSYS IoT Devices
- Support MQTT (Built-in broker)
- Easy online purchase

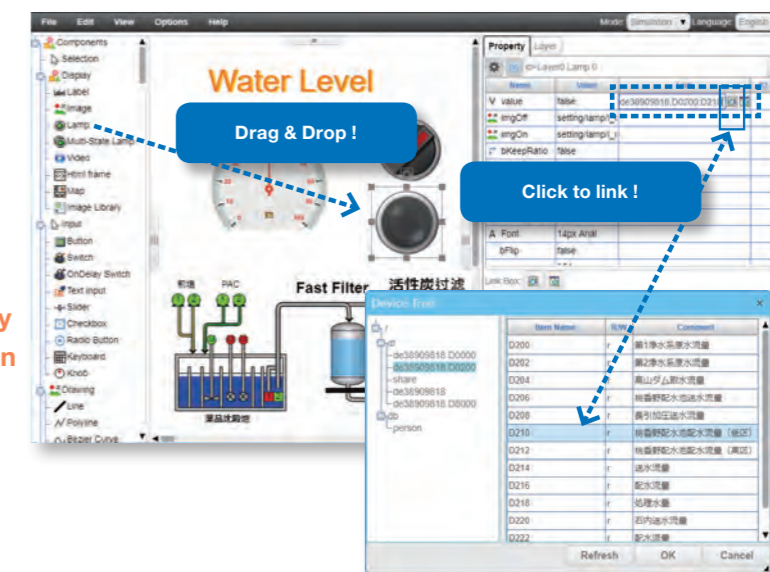

MyCommerce
A Digital River Company

Develop & Runtime environments are based on web server

At the user end, the user needs not to install any special software, only uses a browser (chrome or firefox) to connect to the server, then he/she can configure the system.

Drawing the process flow chart by Drag & Drop, just like operating on PowerPoint

Provides nearly 60 visualization components, quick draw rich expressive monitor screen.

CHS is also available on the AWS / Azure cloud service. Please consult.

Easily Realize Cooperation with Partner Solutions

Software

I/O interface expansion modules of the configurable type controllers and the IoT Edge controller.

CONPROSYS and Partner Solutions

Microsoft Azure IoT Hub Communication Function

CONPROSYS VTC can be used to implement Azure IoT devices quickly

By VTC (Visual Task Control) which is a task programming function standardly built-in CONPROSYS, data can be directly transmitted to Azure. There is no need to develop an application for communicating with Azure.

Specifications for communication with the Azure IoT Hub

Item	Specification	Item	Specification
Number of connected Azure IoT Hubs	1 (One device can connect to only one Azure IoT Hub.)	Transmission timeout period	30 seconds
Communication protocol	HTTPS (AMQP and MQTT are not supported.)	Reception method	Automatic execution of the received data processing when transmission is executed
Azure IoT Hub security	Authentication with security token	Reception interval	Synchronized with the transmission interval
Transmission method	Execut the "Send Azure IoT" process task	Received data processing	substitute the data into the TAG or STAG of the process task has assigned.
Transmission interval	Optional (when the "Send Azure IoT" task is executed)	Reception data format	JSON format (TAG and STAG specification and substitute value)
Transmission data format	JSON format (The specified file is converted to JSON format and transmitted.)	TAGs that can be used for reception data	"TAG00" to "TAG99" and "STAG00" to "STAG99"

SD Cards for Communication with Partner Solutions

The optional SD card makes it possible for the built-in functions of CONPROSYS to communicate directly with the partner solution. By inserting the SD card in a CONPROSYS controller, the IoT settings of the related company are added to the maintenance menu of the CONPROSYS controller.

Name	Model	Interface	Memory capacity	Dimensions
SD card for communication with HULFT IoT	CPS-SD-HUL-01	SD Memory card Informace	1,800MB	24.0 (W) x 32.0 (D) x 2.1 (H)
SD card for communication with FUJITSU IoT	CPS-SD-FUJ-01			

*1 SD cards for ThingWorx IoT are provided via Hitachi High-Tech Solutions Corporation.
*These option SD cards work with the firmware version 3.0.0 or later of the CONPROSYS controllers.

Examples of Using VTC for Partner Solutions

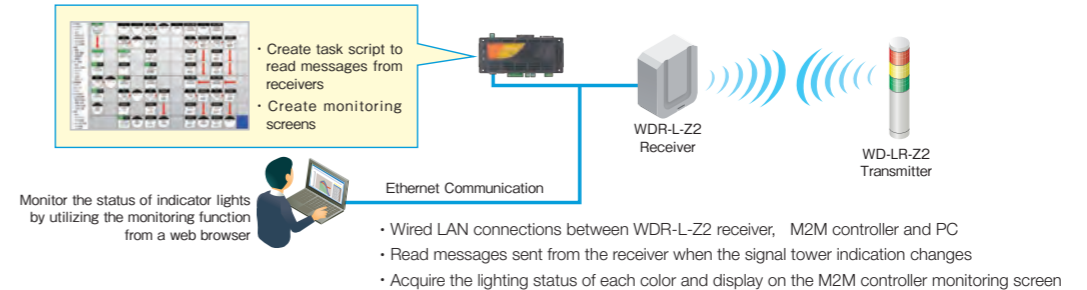

Sample task scripts now available! Free of Charge

Sample task scripts for linking with partner solutions can be downloaded from the "Script sample programs" page of our company's website.

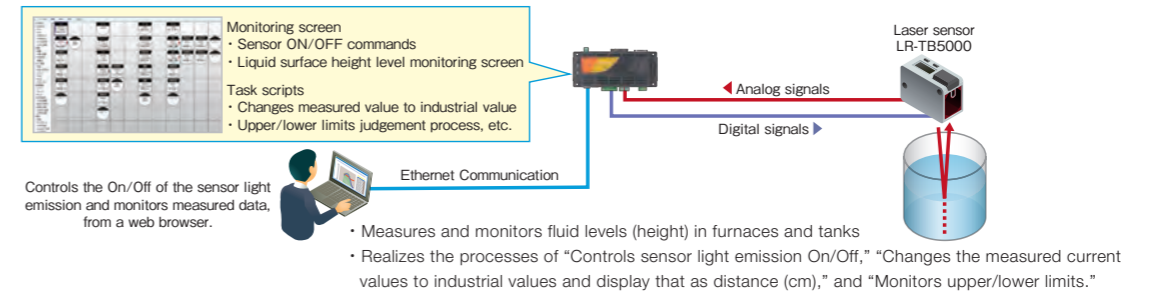

Sample Task 1 Acquisition & indication of data using PATLITE Corporation AirGRID signal towers

Acquires lighting data sent from AirGRID series receivers via Ethernet connection.

Sample Task 2 Connection with the TOF laser sensor of KEYENCE

Connects with the laser sensor (LR-TB5000), perform processes of "Sensor light emission On/Off control," "Current value display," and "Upper/lower limit monitoring."

For Using Various CONPROSYS Co ntrollers for Other Usages Software Development Kits

These Software Development Kits are available free-of-charge for using a variety of CONPROSYS controllers.

CONPROSYS Linux SDK

Free of Charge

This is a software development tool used to create programs when using the CONPROSYS hardware as a Linux controller.

→ Download from Contec website

Supported products		M2M Controller series (Integrated type, configurable type) M2M Gateway series
Operating environment	Host PC for development (cross development environment only)	Linux distribution: Ubuntu 14.04 (64-bit version)/Ubuntu 16.04 (64-bit version) 40 GB or more free space required The user must have administrator rights that enable the execution of the sudo command.

Provides two software development environments

The CONPROSYS Linux SDK provides two SDKs: a cross development environment that uses the host computer and a self-development environment that is executed on the CONPROSYS hardware.

Cross development on the host PC

* An ISO image file for writing media with media writing software is available.
* Use writing software when creating a DVD-R or other installation media.

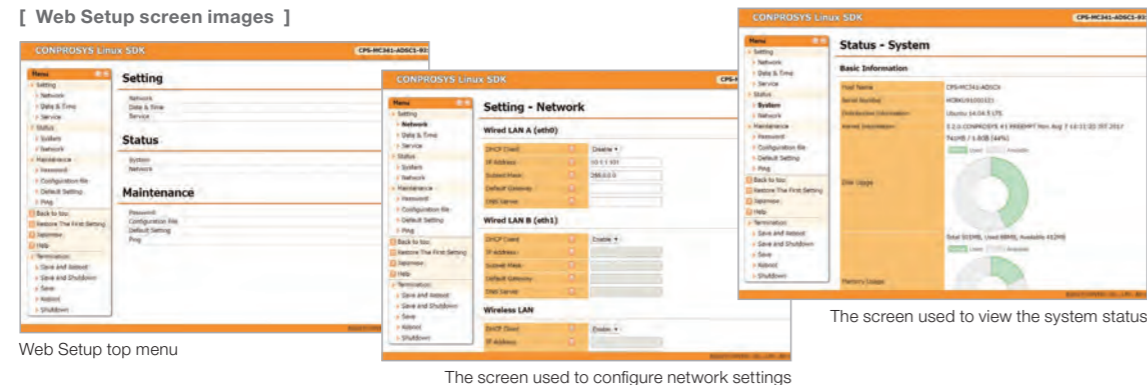

Self-development on the CONPROSYS

* Only Ubuntu 14.04 is supported for the self-development environment.

In the self-development environment, the CONPROSYS is equipped with a web server, so connecting to the CONPROSYS from a web browser on a PC or a similar device makes it possible to view the network settings and the system status.

In order to use this product, the firmware of the main unit must be compatible. Please confirm compatible firmware on our website.

[Key Features]

- Using CONPROSYS Linux SDK, it is possible to add custom programs built using cross-development on the host PC.
- Data linkage with HMI and VTC is possible using internal variables (TAG) from custom programs.
- There are two types, including one program that executes when during start up and another that is invoked on VTC.

¹: The capacity of memory is a value when 1GB is calculated by 1 billion bytes. The capacity that can be recognized from OS might be displayed fewer than an actual value.

²: Pay attention to the ambient temperature when operating 1000BASE-T.

³: Consider ambient temperature derating.

⁴: When you use an optional power product (CPS-PWD-90AW24-01).

There are over 20 types of CONPROSYS I/O modules that can be stack connected with the controllers. (Refer pages 59 to 60 for I/O modules lineup.)
These modules are driven by the similar API software as the one used for CONTEC PCI cards & USB units. It is possible of highly compatibility at the application level.

Solution Products From Contec Komaki Plant

CONPROSYS Alpha series

A box shaped unit with all the necessary functions for onsite installation

IoT BOX

This product features all the equipment necessary for data collection, including IoT device, power supply, circuit breaker, and optional communication antenna, all selected by the customer and pre mounted in a cabinet.

Model	Description
CPSA-CSU	CONPROSYS Alpha IoT BOX IoT system equipment of plastic type or metal type cabinet

Swiftly resolves long-standing factory issues!

Easy-Installation Package

Antistatic Electricity Check System

Operators employing insufficient static electricity countermeasures can be detected by checking the performance of antistatic shoes and wrist straps. Results (date and time and measured values) can be saved as CSV files for each test subject and can be used as evidence.

*Image is for illustration purposes.

CPSA-SEC100	CONPROSYS Alpha Antistatic Electricity Check System

Swiftly resolves long-standing factory issues!

Easy-Installation Package

Torque Driver Check System

Torque drivers with inappropriate settings can be detected by judging whether settings are within the suitable range. CONTEC has packaged the hardware and software mechanisms for managing measurement results as electronic data.

Remote I/O System for IoT

CONPROSYS nano series

Remote I/O devices for digitizing interspersed local devices. CONPROSYS nano is easy to use and excellent cost performance, which accelerates digital transformation of industrial systems.

Best value remote I/O

Remote I/O equipment that does not compromise ease of use and narrowed down to necessary functions. Modular design realizes lean configuration with minimum required I/Os.

Programmable with IEC 61131-3 PLC languages

Coupler unit Programmable Remote I/O

CODESYS runtime that supports the IEC61131-3 PLC languages has been built-in. It is possible to write a control program developed in a CODESYS development environment into the unit.

Supports Windows PC, Linux PC, or Modbus device

Coupler unit Remote I/O

It can be used as a remote I/O device of equipment with Modbus master function such as Windows PC, Linux PC*, and PLC.

Sub-1GHz band Wireless

Wireless I/O series for US / EU / China

Wirelessly communicate input voltage signals or input/output digital signals from terminals up to 1 km apart.

[Key Features]

- Highly reliable mesh communication
- Supports Sub-1GHz band wireless with excellent transmission distance
- Driver library for Windows (available) and Linux (available soon)

GW1-ETH-WQ-US Gateway terminal (master) for computer
AI-1004LY-WQ-US Analog input terminal (slave) 10-bit, 4ch, ±10V
DIO-0404LY-WQ-US Digital I/O Terminal (slave) isolated input 4ch, output 4ch

Application Example of Wireless I/O Series

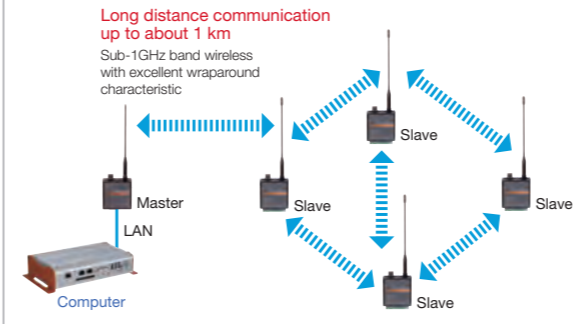

Implementation image at water treatment plant

Benefits of the System

- **Ideal for monitoring targets scattered in a wide area**
Because the superior in long distance wireless communication feature, it is suitable for installation on monitored objects scattered in a wide area.
- **Highly reliability prevents data loss**
If a communication failure occurs between a certain slave terminal and the master gateway, the system mesh communication function will make this slave terminal communicate with the master gateway via another slave terminal.
- **Easy to mount**
By using the optional bracket, the robust and compact terminal can be mounted on a DIN rail.

Applications and Solutions

- Airport luggage conveyor control system
- Distributed signal monitoring system in factory with wide site
- Temperature monitoring system for a wide warehouse where layouts of stored products are changed frequently
- Monitoring system which can use Sub-1GHz band wireless to ensure of the communication channels if there is too much WiFi (2.4 GHz) wireless signal sources
- Tank level monitoring system

Main Features of the Wireless I/O Series

- Highly reliable Mesh communication, AES-encrypted data communication
- Supports ambient temperatures from -20°C to 60°C
- Compact design (62.0(W) x 64.0(D) x 24.0(H)mm, No projection and antenna included)
- Can be installed on a DIN rail with the optional DIN rail mounting bracket
- Driver available for Windows (free download from CONTEC website) and Linux (available soon)
- A gateway (master) can connect with up to 128 I/O terminals (slave)

Compatible with IEC 61131-9 compliant sensors and actuators

ICONPROSYS IO-Link Master

Utilize existing field network on site.
Easily connected with IO-Link sensors!

[Key Features]

- Supports multiple Field Bus Protocols
- 8-channel Independent IO-Link Ports
- IP67 dust-proof, drip-proof design
- Easy to set via web browser

Advantage of IO-Link IO-Link is a global standard communication protocol to connect with sensors / actuators, defined as IEC 61131-9. It is expected as an open network standard at the sensor level that contributes to reducing manufacturing downtime.

- POINT 1** Possible to connect sensors from various manufacturers only with one cable
- POINT 2** Possible to capture diagnosis information such as cable disconnections or device operating status
- POINT 3** Enables error free device replacement, and quick restart
- POINT 4** High compatibility with field networks

Data Acquisition, Measurement and Control

Offering Multi-Faceted I/O Product Lineup to Meet Your Needs

Contec's extensive I/O product line offers more than 400 custom designed, developed & manufactured boards. Utilized the fields of manufacturing, measurement and control; these products are essential for testing, automated examination instrumentation, and research and development.

USB

USB Module

This product features "USB (Universal Serial Bus)," a serial bus standard to connect peripheral devices to computer. Various functions can be added to PC with USB connector port.

PCI Express

PCI Express Card

This product features serial transfer bus architecture "PCI Express," which is successor of PCI bus. Various functions can be added to PC with PCI Express bus expansion slot.

PCI

PCI Card

This product features "PCI (Peripheral Component Interconnect)," an industry standard bus architecture that communicates through PC and peripherals. Various functions can be added to PC with PCI bus expansion slot.

Analog I/O

Interface modules that convert analog signals into digital data.

The ability to convert analog signals to data (digital signals) and feed them to a computer allows the user to measure external events.

Conversely, converting computer data to analog signals for output allows the user to control external devices.

Digital I/O

Interface boards that provide computers with digital signal I/O functions.

They monitor the status (ON/OFF) of relays, operating switches and measurement devices as well as controlling (ON/OFF) lamps, 7-segment display units and relays. These boards can also be used as an interface for conducting digital communication with controllers such as PLC or microcomputers.

Counters

These cards communicate pulse train input and pulse number count functions to the PC. They calculate addition and/or subtraction of count values onboard and read out current count values when needed. They can connect to incremental rotary encoders, linear gauges, pulse output type flowmeters or power meters.

						Model

				LVTTTL input	4 ch		Bus Master

Motion Controllers

Enables PC controlled output of pulse train according to a specified pulse number and frequency. Can automatically output control pulse which corresponds to operation parameters such as target position, speed and acceleration/ deceleration rate. Limit input functions [required for positioning control] are also provided. For use with pulse-input type stepping motors or servo motors.

Software

We provide all kinds of middleware for program development efficiency. In addition, all kinds of software are available such as various measurement application programs that can be used as genuine PC data loggers or electronic measuring devices from the first day.

API Programming Using Windows / Linux

Driver Library API-PAC(W32)

The library software that provides CONTEC's measurement control device commands using OS-standard API. High-speed application software can be created that makes use of device characteristics in all kinds of programming languages including Visual Basic, Visual C and gcc.

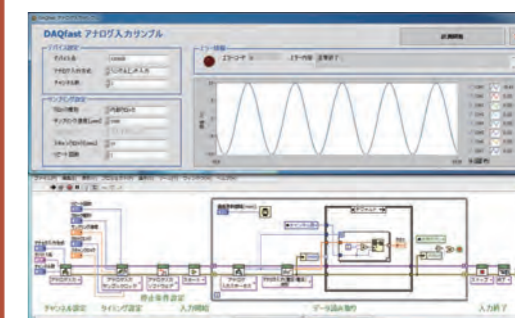

Standard Bundled Software

Data Acquisition with LabVIEW

LabVIEW-compliant Data Acquisition Library DAQfast

CONTEC's devices are LabVIEW compatible. Usable in the same way as LabVIEW standard data collection VI using the dedicated library DAQfast plug-in.

Graph Observation & Data Collection Tool

Data Logging Software C-LOGGER

This is data logging software that is compatible with CONTEC analog input devices. C-LOGGER provides true data collection and monitoring function, such as collected signal data graph drawing, zoom observation, file saving, and dynamic transfer to Excel (spreadsheet program). No additional programming is required.

Cables

Cable with different connectors are designed to connect our interface cards and units to external world.

Note 1: Each cable connects one connector of the board/unit. For the board/unit with two connectors, two cables are required.

Note 2: A longer cable will have a larger resistance, customer needs to select a suitable length of cable. Normally a three meters or longer cable is not suitable to connect external analog signals to the analog I/O boards. It is user's responsibility to select a connecting cable for the application system.

	Connector Type	Cable Type	Cable Length	Model

* These fan-out cables convert a 78/68/44/37-pin connector of a serials communication board to RS-232C standard 9-pin D-SUB connectors

Screw Terminal Blocks

The spring-up type terminal blocks help users to wire the external devices to Contec PCI Express / PCI bus interface boards through the connecting cables. The blocks equipped 3mm / 0.12' spring-up type screws and are 35mm / 1.38' DIN-rail mountable.

Spring-up type screw mechanism An internal spring retains the terminal screw by lifting it up when it is loosened and removed from the screw hole. This allows efficient wiring and prevents accidental dropping of terminal screw.

Providing Custom Communication Products that Deliver High Reliability and Superior Functionality

Contec's network products allow our customers to provide safe and convenient communication network environments in locations where security is a necessity (offices, schools, factories and logistics systems). Our expertise and strength in the design and development of industrial products allows us to ensure high reliability and functionality of our network products and meet our customer's every customization requirements.

CONTEC AMERICAS INC.

Technology Innovators Delivering Creative and Highly Reliable Solutions

Contec Americas Inc. is an electronics manufacturer and systems integrator with a wide portfolio of embedded computers, Single Board Computers (SBCs) and display solutions. We add value through our world-class engineering, unsurpassed quality, life cycle management, Value Analysis/Value Engineering (VAVE), logistics and post-production services. We are a strategic partner supporting customers around the world in segments such as medical and life sciences, robotics, security, industrial automation, IoT, energy and aerospace.

High Performance Server Series

Long life, high performance 1U, 2U, and 4U servers based on a common platform and the same proprietary Contec motherboard for ultimate scalability and support.

COMPUTING PLATFORMS

Purpose-built embedded computing solutions designed to improve quality and reduce cost.

- Rack Mounts & Servers
- Small Form Factor
- Towers & Workstations
- Custom Embedded Solutions

Displays, All-in-Ones (AIOs) and Tablets

Highly reliable, advanced display, All-in-One, and Panel PC solutions customers requiring long-life or custom display solutions.

- Medical and Industrial Grade
- U.S.-Based Clean Room for Display Integration
- Rugged Tablets
