Welcome to the Basler Product World

This brochure gives you a comprehensive overview of all our imaging components for your vision application. Whether you are looking for information about our camera series, lenses, frame grabbers, software, embedded vision solutions, or other vision components you will find it here. In addition to the "hard facts" – namely the most important product highlights and specifications – find out what makes Basler and our products special.

We have one of the largest product ranges in the industry with the right products for almost any application. Our worldwide sales organization is available to help you make the right choice. Contact our team and together we will find the right imaging components for your individual vision application.

baslerweb.com/sales

Our Online Tools

In addition to our strong sales team, we offer comprehensive tools to assist you in your research and decision-making process for suitable components for your vision system.

baslerweb.com/tools

One of these tools is the Vision System Configurator which supports you by configuring the matching image acquisition components for your vision system. Go step by step and select cameras, lenses, power and data cables as well as other accessories: baslerweb.com/vision-system-configurator

How to Read Our Camera Model Names

AC	A	2040	180	K	M	NIR
Model	Type	Resolution	Frame Rate	Interface	Color	Spectrum
a2 = ace 2 ac = ace be = Basler beat bo = boost da = dart pu = pulse ra = racer sc = scout	A = Area scan L = Line scan	Horizontal pixels	Number of frames per second (fps) at full AOI	k = CL c = CoaXPress g = GigE u = USB 3.0 m = BCON for MIPI l = BCON for LVDS	m = mono c = color	NIR = Near Infrared Product Line BAS = Basic PRO = Pro ISP I = Internal ISP for MIPI cameras

Specifications are subject to change without notice.

Latest specifications and availability can be found on our website baslerweb.com/products.

Please visit baslerweb.com/manuals for the detailed camera User's Manual and baslerweb.com/thirdparty for information on third party software.

About Basler

Basler is a leading international manufacturer of imaging components for computer vision applications such as cameras, lenses, frame grabbers, software as well as embedded vision solutions, customized products and consulting services. The products are used in a variety of computer vision markets, including factory automation, medical, traffic, logistics, retail, and robotics. Founded in 1988, the Basler Group employs approximately 800 people at its headquarters in Ahrensburg and other locations in Europe, Asia and North America.

Markets We Focus on

Factory Automation

Medical & Life Sciences

Logistics

ITS

Retail

Management Board

We firmly believe that advances in vision technology improve the quality of our lives. Because of this, we give technology the power of sight.

Core Values

When working with us, you can rely on our core values

RELIABILITY

EASY TO
WORK WITH

BEST VALUE
FOR MONEY

INDUSTRY LEADING

FORGET THE **PROBLEM**
SEE THE **SOLUTION.**

DISCOVER THE FULL SPECTRUM OF BASLER VISION SOLUTIONS.

BASLER
the power of sight

Seeing the solution can be challenging at times. Let us assist you in discovering the right setup for your application. With our extensive know-how and customer orientation, our vision experts will find the best solution for your imaging requirements. The Basler team supports and advises you in choosing perfectly harmonized components, be it cameras, lenses, framegrabbers, lighting, or processing boards. In addition we help you in dealing with more complex issues such as customer-specific product adaptations, consulting services, concept studies, or designing an embedded vision solution. This broad knowledge makes Basler the most trusted brand in the field of machine vision and one of the leading computer vision experts.

BASLER'S VISION COMPONENTS

Basler's Components Enhance Your Vision

An image processing system needs more than just a camera. Only a lens, light source, reliable data transfer and additional components such as frame grabbers, trigger cables, PC cards and power supplies turn a vision system into a functioning unit. High standards must be met in terms of quality, reliability and long-term availability with a good price/benefit ratio.

Basler offers a large selection of vision components that match each other perfectly. Carefully selecting compatible and reliable components for our portfolio is our top priority, as we strive to provide the right needs-oriented setup for complex, efficient systems as well as for cost-effective solutions.

As a leader in technology, Basler is substantially involved in the development of new standards and offers all of the necessary, perfectly matched vision components from one source. As a result, our customers benefit from the superior reliability of their entire vision system.

Need Help Selecting the Right Vision Components for Your Application?

Select compatible components for your vision system with the help of our Vision System Configurator: baslerweb.com/vision-system-configurator

Step by step you can pick cameras, lenses, power and data cables as well as other accessories. We ensure that the selected components fit together.

Typical set-up of a camera system

Basler's Vision Components – Benefits at a Glance

Cost savings

- In-house developments or developments in cooperation with other companies
- Needs-oriented products
- Complexity reduction thanks to perfectly harmonized components
- One-stop shopping
- Single point of contact (spoc)
- Long-term availability

High reliability

- Matching, certified and tested vision components
- Regular function and interoperability tests
- Provision of all required certifications

Good delivery times & long-term availability

- In-house logistics
- Same deliverability for camera and compatible accessories
- Spare parts supply throughout the entire lifecycle

Easy system setup & simple integration

- Broad and harmonized product portfolio
- Time-saving tools to configure and select components
- Professional consulting before and after the buying decision

For more information, please visit baslerweb.com/vision-components

pylon Camera Software Suite

Easy and stable connection of your vision applications with Basler cameras requires the right software in place. The Basler pylon Camera Software Suite consists of reliable, certified drivers for all kinds of camera interfaces, a powerful and easy programming interface, and a comprehensive set of tools for camera set-up.

Highlights

- Easy connecting of Basler cameras via GenTL standard
- Productivity and fast results with pylon SDKs
- Stable, certified drivers for Windows, Linux, macOS and Android
- Rich choice of supported interfaces
- Powerful tools for camera set-up

For more information, please visit baslerweb.com/pylon

See the pylon highlights in our video:

CONNECT Easy link to Basler cameras

Many ways to connect – With pylon you can connect your application in a standardized way via a pylon GenTL producer, or by writing your own code using one of the pylon APIs. With the pylon APIs, developers can either use convenient universal functions that encapsulate the GenICam standard, or use functions for access directly via GenICam.

GenICam and GenTL – Complex details of these standards are encapsulated by the pylon APIs.

Rich choice of supported interfaces – pylon allows connecting your cameras via USB3, GigE Vision, CoaxPress, Camera Link and others. If your application connects via one of the pylon APIs, switching from one interface to another becomes possible with minimal code changes.

CONFIGURE Powerful tools for camera set-up

Get the best possible image – pylon provides you with a rich set of powerful tools for getting the best image out of your Basler camera, such as Vignetting Correction, Sharpness Indicator, Bandwidth Manager and many more.

Fast access to product documentation – The pylon Viewer allows easiest centralized access to comprehensive camera feature documentation, including code samples.

Use the tools in your language – pylon tools can be used in English, Chinese, Japanese and Korean language.

Integrated camera emulator – pylon comes with a camera emulation that allows testing multi-camera connectivity without having to connect any camera.

DEVELOP

High productivity and fast results

80% time savings – Studies show that developers using a pylon API finished tasks in only 20% or less of the time that they needed to complete the same tasks with other comparable APIs.

Easy to learn – With the easy-to-learn pylon APIs and context-related developer documentation, even new employees can become productive right away.

Faster results – The simple structure of the pylon APIs leads to fast development results, leaving the developers more time for other things.

Simple deployment – pylon's copy deployment concept allows installing all necessary pylon components used for your application just by simple file copies.

RUN

Stable operation on all platforms

Certified drivers, reliable performance – Tried and used thousands of times, certified, and the performance speak for the stability of the pylon drivers, which have been optimized continuously for many years.

Real-time performance – In comparison studies, pylon demonstrated an outstanding performance with regard to latency and jitter, making pylon suitable for stable image acquisition even in real-time applications.

Platform-independent – With the pylon APIs, the target platform of the developed application doesn't play any role. It's very easy to switch from a Windows environment to a Linux ARM environment without major code changes. This makes pylon perfectly suitable for the development of embedded systems.

EVEN THE BEST CAN GET BETTER. ACE 2. ENGINEERED FOR YOU.

Basler ace 2

One camera series, two product lines. Always the right choice!

Welcome to the next ace generation! With its optimized hardware design, the latest CMOS sensor technology and our unique Beyond features, the ace 2 addresses both: rising customer needs for cost-effective solutions for standard applications, and increased performance requirements.

Tailored to fulfil the individual tasks of your vision system, the two product lines – ace 2 Basic and ace 2 Pro – ensure higher frame rates, reduced data volumes and superior image quality. And the best part is: you only pay for what you really need. Engineered for you. ace 2.

Highlights

- Two product lines: ace 2 Basic and ace 2 Pro – tailored to different vision needs
- Including unique value-add features like Compression Beyond, Pixel Beyond and PGI
- Fast and cost-effective software integration
- Resolutions up to 24 MP

For more information, please visit baslerweb.com/ace2

Unique Features from Basler

Besides the popular PGI feature set the ace 2 Pro cameras also include our new Beyond features which are especially characterized by the fact that their functionality is unique in the market and often even patented or patent-pending.

COMPRESSION BEYOND

This feature allows you to significantly expand the GigE bandwidth of your ace 2 Pro. Lossless compression enables faster frame rates and therefore higher throughput. To find the optimal balance between image size and image quality for your application, you can individually adjust the compression factor and also choose an even stronger, but then lossy compression.

More information: baslerweb.com/compression-beyond

PIXEL BEYOND

With this feature you can change pixel sizes yourself and simulate certain sensor characteristics, such as those of discontinued sensors for example, which allows for an uncomplicated redesign.

Based on a novel interpolation method developed by Basler, Pixel Beyond overcomes the limits of conventional binning by allowing the use of decimal numbers in addition to integer factors. This results in significantly more flexibility.

More information: baslerweb.com/pixel-beyond

ace 2 Basic

Basler's proven reliability with extensive Computer Vision feature set for standard Machine Vision applications.

Highlights:

- Optimized hardware meets state-of-the-art CMOS sensor technology from Sony
- Powerful Computer Vision feature set
- Unbeatable price/performance ratio for standard vision applications

ace 2 Pro

All the benefits of the ace 2 Basic plus PGI feature set plus new, unique Beyond features for maximum performance.

Highlights:

- Compression Beyond for higher bandwidth on GigE using lossless compression
- Pixel Beyond for uncomplicated sensor redesign through individual adjustment of pixel size and sensor characteristics
- Popular PGI feature set from Basler included
- Excellent price/performance ratio for more demanding vision applications

Watch our simpleshow video to learn all about the benefits of the ace 2 camera series and Basler's Beyond features.

Basler ace

Small, affordable and highly productive

High quality and performance, low list prices from 199 € and small cases with 29 mm×29 mm as well as 30×40 mm footprints: This combination makes the ace one of the top-selling cameras, with thousands of satisfied customers. With more than 130 models, the ace series is the largest camera series in the industrial image processing market

Highlights

- Broadest selection in the industry offering various resolutions, speeds, interfaces and sensors from all leading manufacturers
- State-of-the-art CMOS sensor technology
- High value-add features

For more information, please visit baslerweb.com/ace

ace Product Lines

(real sizes)

ace Classic Keyfacts

The ace Classic includes camera models with CMOS sensors from CMOSIS, e2V and ON Semiconductor (MT line) as well as CCD sensors from Sony. It offers a broad selection of interfaces (USB 3.0, GigE, Camera Link) and covers resolutions from VGA to 14 MP.

- First of its kind and the most successful camera series in the Machine Vision market
- Standard Feature Set

ace U Keyfacts

With speeds of up to 751 fps and the latest CMOS sensors from Sony (Pregius, STARVIS, Exmor R) and ON Semiconductor (PYTHON), the ace U represents the next evolution of the ace in the areas of sensor technology and firmware features.

- Advanced Feature Set including PGI, a unique feature combination, consisting of 5×5 Debayering, Color-Anti-Aliasing, Denoising and Improved Sharpness

PGI

ace L Keyfacts

The ace L profits from the same evolutionary steps in firmware features as the ace U. Furthermore, it is capable of carrying high resolution 9 and 12 MP Sony Pregius CMOS sensors with optical formats above 1".

- Brilliant image quality at speeds of up to 42 fps
- Advanced Feature Set including PGI, a unique feature combination, consisting of 5×5 Debayering, Color-Anti-Aliasing, Denoising and Improved Sharpness

PGI

PGI Feature Set

All cameras within the ace U and ace L product line come with Basler's powerful in-camera image optimization PGI that improves your images at the full speed of your camera. It is a unique combination of 5×5 Debayering, Color-Anti-Aliasing, Denoising and Improved Sharpness. This gives you the opportunity to get the best pictures directly from your camera without any

additional processor load. Use the options of the Basler pylon Camera Software Suite to enable PGI, or change settings for selected PGI components for optimal results.

Learn more about PGI at
baslerweb.com/PGI

ALL YOU NEED IS **ACE.**

ANY INDUSTRY. ANY NEED. WITH MORE
THAN 130 MODELS THERE'S AN ACE FOR IT ALL.

Basler boost

It's time to launch your application into new galaxies of performance

The boost is our first camera with a CoaXPress 2.0 interface that offers its users an unprecedentedly high bandwidth for data transfer. New CMOS sensors are combined with the latest frame grabber technology. This leads to easy and fast transmission of large amounts of data over long distances – for an extraordinary price/ performance ratio.

Evolve with CoaXPress 2.0 (CXP-12)

With the boost series, Basler is one of the first camera manufacturers on the market to expand its portfolio with a camera featuring the CoaXPress standard in its version 2.0 combined with modern CMOS sensor technology. High speed, high resolution and easy cabling are just some of the advantages of this match of latest technology developments. Upgrade your Camera Link or CXP-6 vision system and reduce your system costs significantly by switching to CoaXPress 2.0 with our boost series.

Bundle with CXP-12 Interface Card

If you need the right acquisition card for your application, we have a perfect solution for you. While in the past customers had to purchase the various hardware components from different suppliers, now we offer you the

opportunity to receive the components from one single source. The advantage: a smooth integration of tested and qualified components into your image processing system and at the same time a noticeable cost and time saving advantage. Our pylon Camera Software Suite addresses both, camera and interface card, making it even easier to set up the vision system.

Evaluation Kit – Everything You Need for Testing

Testing is essential, but it's also a hassle, and can slow down your project plans, especially when dealing with new interface versions like e.g. CoaXPress 2.0. Therefore, we provide not only camera and interface card, but also all suitable vision components for your test scenario including CoaXPress cable, I/O cable, heat sinks and lens mount adapter. For more information on the CXP-12 interface card, please see [page 45](#).

Highlights

- Excellent image quality with 9MP/12MP Sony Pregius CMOS sensors or 20 MP/32 MP/45 MP XGS sensors from ON Semiconductor
- 12.5 Gbps transfer rate through one channel
- Impeccable image transmission via powerful CoaXPress 2.0 (CXP-12) interface
- Easy installation with matching Basler CXP-12 interface card

For more information, please visit baslerweb.com/boost

BOOST

Product Group Specifications

Interface	CoaXPress 2.0 (CXP-12)
Housing Size [L × W × H]	45 mm × 80 mm × 80 mm
Housing Temperature during operation	0 °C - 50 °C
Typical Weight	480 g
Lens Mount	Flexible mount concept (e.g. adapters available for C-mount, F-mount, M42×0.75 and M42×1)
Power Supply	PoCXP or 24 VDC
Digital I/O	1 input, 2 GPIO
Synchronization	Via hardware trigger, via software trigger, or free-run
Exposure Control	Via hardware trigger or programmable via the camera API
Conformity	RoHS, CE, GenICam, KC, UL, EAC ¹ , CoaXPress 2.0
Driver	Basler pylon Camera Software Suite
Operating System	Windows, Linux (64-Bit)

¹ Only for selected models, please refer to our website baslerweb.com/boost for detailed information.

Basler beat

High speed and high CMOS image quality combined in a proven design

The convincing argument for this advanced camera family starts with its superior image quality even at high image capture rates and high resolutions. The Basler beat series uses the high-speed and very sensitive CMOS sensor CMV12000 by CMOSIS. It features both a mono and color model with a full resolution of 12 megapixels with progressive scan and global shutter technology. This CMOS sensor yields far better image quality than the older CMOS sensors. Its output is easily comparable to the image quality created by CCD sensors.

Highlights

- Ideal fit for price-sensitive applications where high speed and high resolution are a must
- High bandwidth connection for maximum grabbing speed with Camera Link, and compatibility with all common frame grabbers

For more information, please visit baslerweb.com/beat

BASLER BEAT

Product Group Specifications	
Interface	Camera Link

Basler pulse

A compact and low weight camera, with elegant design

The pulse series stands out, starting with a sharp, robust metal housing including tripod adapter and a CS-mount which can easily be converted to C- or S-mount. pulse cameras are equipped with the USB3 Vision plug and play interface and offer great stability and impressively low power consumption - only 1.3 watts. These and other features make the pulse a very compact solution for easy system integration as well as for the switch from analog to digital vision technology.

Highlights

- Sharp design with elegant, lightweight and small-size metal housing
- Most pristine and colorful images with high-quality CMOS sensors with global and rolling shutter options
- Resolutions from 1.2 to 5 MP and up to 60 fps
- Including PGI feature set

For more information, please visit baslerweb.com/pulse

Basler scout

Sophisticated in detail, versatile and proven worldwide

Highlights

- Selected high quality CCD sensors from Sony and CMOS sensors from ON Semiconductor
- Up to 12 bit depths and no bandwidth limitation on 8 bit data flow inside the camera
- Small, rugged housing for easy integration
- Perfect fit for a variety of applications
- VGA to 2 MP and up to 70 fps

Basler racer

Exceptional line scan performance - low space requirement

Highlights

- Superior speed, reliability and image quality combined with low space requirement and highly attractive pricing
- CMOS sensors with 2k to 12k resolution and up to 80 kHz line rate
- Perfect fit for a wide range of applications — including multi-camera systems

For more information, please visit baslerweb.com/racer

Basler IP Fixed Box

Surveillance cameras with exceptional light sensitivity and premium image quality

Highlights

- Featuring CMOS sensors with resolutions up to 5 MP and frame rates up to 30 fps
- Multi-streaming and multi-encoding
- PoE, microSDHC card slot
- MJPEG, MPEG-4, H.264
- Robust metal housing

For more information, please visit baslerweb.com/box

IP FIXED BOX

Product Group Specifications

Interface	Fast Ethernet
Housing Size [L × W × H]	109.7 mm × 29 mm × 44 mm (full metal casing)
Housing Temperature during operation	-10 °C - 50 °C
Typical Weight	210 g
Lens Mount	CS-mount, C-mount ¹
Power Supply	PoE (Power over Ethernet IEEE 802.3af Class 2) or 12 to 24 VDC
Digital I/O	3 (configurable)
Alarm Management	Events triggered by motion detection or external input; ring buffer for pre and post alarm images; image upload over FTP, e-mail or HTTP and microSDHC card slot for local storage
Conformity	FCC Class B, CE, RoHS, IP30, ONVIF, EAC
Video Compression	MJPEG, MPEG-4, H.264 (MPEG-4 AVC)
Video Streaming	Multi streaming and multi encoding, multicast and unicast

¹ Only for BIP2-1920-30c.

Embedded Vision Meets Simplicity

We focus on the simple integration to embedded vision systems. In this way, we help our customers to develop applications that create a safer and smarter future.

Combining embedded design and vision technology is a rising trend. Embedded vision will replace a variety of PC-based image processing solutions and at the same time enable a number of new applications in which small size, low power consumption and low costs are important.

Basler Embedded Vision Solutions: We Bring Your Idea to Life

To do so we support you in every step for the realization of your embedded vision application: from consulting to development, production and life cycle management. Our broad product portfolio gives you everything you need to set up a system, and our software gets everything up and running immediately.

One-Stop Shopping: Your Benefits with our Embedded Vision Solutions

- Expert knowledge in vision technology: more than 30 years of experience in image processing
- Competent consulting and support in the development of your embedded vision system
- Broad product portfolio: Camera module, processor unit and application software from one source
- Integration: Extensive software and IoT competence

Basler Embedded Vision Kits

Our standard is your starting point

As a standard, we have enabled specifically suited hardware and software components and put them together in our kits. They offer everything you need to evaluate our dart camera modules, the platform and their various interface technologies so they can be easily designed in. This way, you can start your embedded vision project as hassle free as possible! Our Embedded Vision Kits are powered by:

The four kinds of Embedded Vision Kits all feature a dart color camera module with S-mount, a lens and necessary cabling.

Highlights

- Ready-to-go with pre-installed BSP (Board Support Packages) and sample implementation
- All necessary camera accessories included
- pylon Software Development Kit (SDK) for the simple creation of applications in different programming languages

For more information, please visit baslerweb.com/embedded-vision

Evaluation Kit: USB 3.0 Interface

- Due to the USB 3.0 interface, the Evaluation Kit is an easy to install vision kit that works on every PC hardware and embedded system with USB 2.0 or USB 3.0 connector.
- For easy evaluation of camera utilization and pylon Software Suite features.

KIT	SENSOR	RESOLUTION [MP]	FRAME RATE [FPS]
daA2500-14uc-EVA	MT9P031	5.0	14

Add-on Camera Kits

- Add-on Camera Kits are suitable to extend your existing processing board with Basler vision components.
- Suitable software components including camera driver and pylon Software Development Kit (SDK) can be downloaded from baslerweb.com/software.

Basler dart

With its single-board design, the Basler dart camera series offers the latest technology in a small form factor. The dart not only scores points with its compact design, but also with its excellent price/performance ratio and flexible integration capabilities: The camera modules can be connected to a single board computer (SBC) via USB 3.0, for example, or directly to a SoC (System-on-Chip) or FPGA (Field Programmable Gate Array) via MIPI or LVDS based data transmission. This allows the dart cameras to be used for a variety of embedded and machine vision solutions.

Image Signal Processing: on the camera or on the processing unit, just as required

dart cameras provide in-camera image pre-processing performed by an integrated Image Signal Processor (ISP). For those embedded systems that already provide an ISP we offer camera modules without ISP but with drivers utilizing the host's ISP – resulting in the leanest solution and a cost optimized set up.

Highlights

- Smallest board level cameras with extremely low weight and low power consumption
- Bare board: just 27 mm×27 mm and 5 g in weight; S- and CS-mount: only 29 mm×29 mm at 15 g
- Popular CMOS sensors from Sony, ON Semiconductor and e2v with resolutions from 1.2 to 13 MP and up to 160 fps
- USB3 Vision: Plug and play with a single cable solution compliant with industry standards
- Basler BCON for MIPI interface tailor-made for MIPI CSI-2 connections
- Excellent color reliability and image adjustment features for color-critical applications
- Best-in-class image pre-processing like debayering, denoising, improved sharpness, and more

For more information, please visit baslerweb.com/dart

Image processing in on-camera ISP

With on-camera ISP: Bare board and S-mount models with BCON for MIPI interface and 5 or 13 MP resolution. Here, specific drivers for NXP's i.MX 8M Mini, 8M Quad, 8QuadMax and NVIDIA's Jetson™ platform are available as a standard.

Image Processing in host ISP

Uses the ISP of NXP's latest processing board i.MX 8M Plus: The new 8 MP dart BCON for MIPI camera module features a premium 4K sensor with excellent High Dynamic Range (HDR) from ON Semiconductor. Further SoCs with integrated ISP can be supported upon request.

SUPER SMALL
— meets —
SUPER POWERFUL

For even more flexibility: New dart USB 3.0 models

- Now with powerful Sony IMX392 and IMX334 sensors
- Resolutions of 2.3 and 8.3 megapixels

Basler MED ace

Basler MED ace area scan cameras are our first camera series specifically designed for Medical & Life Sciences. They are also the perfect answer to the discontinuation of CCD sensors. Equipped with CMOS sensor technology at its best, the MED ace delivers even better image quality at much lower costs than CCD cameras.

With Sony's powerful PREGIUS sensors and exceptional PYTHON sensors by ON Semiconductor, the MED ace stands out with up to 164 fps and 20 MP, pixel sizes up to 5.86 μm and sensor sizes up to 1.1 inch.

Highlights

- Area scan camera specifically designed for Medical & Life Sciences
- Including Basler's powerful MED Feature Sets
- Latest CMOS technology with Sony PREGIUS and ON Semiconductor PYTHON sensors
- Compliant with ISO 13485:2016
- Ideal for applications such as microscopy, laboratory automation, ophthalmology

For more information, please visit baslerweb.com/MEDace

Basler's Powerful MED Feature Sets

Our unique and industry-leading MED Feature Sets for Medical & Life Sciences deliver everything that our customers are looking for. They combine market-leading hardware, firmware and pylon software features:

Easy Compliance

Brilliant Image

Perfect Color

Dust Protection

Low Light Imaging

Industrial Excellence

High Speed

We developed these unique features specifically to address the high imaging demands in Medical & Life Sciences and to reduce our customers' development efforts.

Compliant with ISO 13485:2016

With the certification according to ISO 13485:2016, we have proven our quality standards. We have adapted our quality management system to the requirements of the ISO 13485:2016 standard in selected organizational areas, according to which we produce, distribute and service the MED ace cameras.

For you, this means consistency, reliability and quality. Whether you want to operate internationally or expand locally. The quality management standards set for the ISO 13485:2016 certification help you to achieve quick time to market. Let us assist you with documentation and preparation for the certification of your medical device.

Basler MED Feature Sets in Brief

Easy Compliance

We produce, distribute and service our MED ace cameras according to ISO 13485:2016. In addition, we comply with all relevant standards.

Brilliant Image

You get best quality pictures from the first time you activate the camera because MED ace cameras have optimal wake-up settings, Basler's PGI algorithm and auto-image functions.

Perfect Color

Design the color reproduction of your picture yourself: e.g., by adjusting the settings for hue, saturation, brightness and contrast over the entire picture as well as for individual colors.

Dust Protection

We ensure special cleanliness requirements through the sealing of the sensor room, the separate production of the MED ace in a cleanroom and strict tests for dust and other particles.

Low Light Imaging

Thanks to modern CMOS sensor technology and our mode for long exposure times, you produce best quality images even in low light.

Industrial Excellence

Our tested high quality cameras together with our pylon software package, our extended camera control functions and our individual customer support enable easy camera integration.

High Speed

Global shutter, CMOS sensor technology and USB3 Vision interface technology enable frame rates of up to 164 frames per second with the MED ace.

Basler PowerPack for Microscopy

Highlights

Plug-and-play package for microscopy with all necessary components at hand:

- Microscopy camera with the latest CMOS sensors (Microscopy ace and Microscopy pulse)
- Professional microscopy software for image acquisition and analysis
- Quick Install Guide for quick and easy startup
- Compatible and tested accessories

For more information, please visit baslerweb.com/powerpack-for-microscopy

Basler 3D Cameras

We offer 3D solutions based on the Time-of-Flight (ToF) technology, which are suitable for the mass market and help our customers lower their total system costs and design their 3D applications more efficiently. The biggest benefit of Time-of-Flight Cameras is that they are compact, precise and affordable, yet less complex than other 3D cameras. Beyond this, a time-of-flight camera requires neither contrast nor additional light to work, and can be used on the fly, as objects move past.

Basler blaze

The fully-calibrated blaze 3D camera with integrated optics and GigE interface uses the time-of-flight principle to capture scenes and objects at a glance, generating 2D and 3D data with a multipart image from distance, intensity and confidence maps in real time. Elimination of moving components means robustness and stability for a variety of applications such as robotics, industrial automation, logistics and medicine. With integrated Sony DepthSense™ sensor technology the blaze makes 3D measurements more precise, accurate and faster.

Highlights

- Top-class precision by Sony DepthSense™ IMX556 sensor and advanced laser technology (940 nm VCSEL)
- Precise, millimeter-accurate optical measurement with the time-of-flight method
- Real-time streaming of 3D point clouds and grayscale images with 30 frames per second
- Daylight robust & independent of ambient light
- IP67 protection and shock-proof for stable results under difficult conditions

For more information, please visit baslerweb.com/blaze

CAMERA MODEL

blaze-101

Sensor	Sony DepthSense™ IMX556
Resolution	640×480 @ 30 fps
Interface	GigE Vision, GenICam
Field of View	67°×51°
Range	0 m - 10 m
Accuracy (typical)	±5 mm (0.5–5.5 m)

Basler ToF Camera

Basler's ToF Camera with standard machine vision interface and high resolution makes 3D shape and volume measurement applications quick and easy.

CAMERA MODEL

tof640-20gm_850nm

Sensor	Panasonic MN34902
Resolution	640×480 @ 20 fps
Interface	GigE Vision, GenICam
Field of View	57° × 43°
Range	0 m - 13 m
Accuracy (typical)	±10 mm (0.5-5.8 m)
Housing Size	142 mm × 62 mm × 69 mm
Conformity	CE, FCC, RoHS, REACH, IP30, Eye safety RG1 IEC62471:2009, EAC
Third-Party Support	OpenCV, HALCON, MIL, Point Cloud Library (PCL), ROS

TAKE CONTROL OF THE THIRD DIMENSION

Basler Lenses Give Vision Applications the Required Sharpness

Lenses depict the captured light on a camera's sensor. Combined with a camera and lighting, they are instrumental in determining the image quality. In the worst case, choosing the wrong lens can result in an irretrievable loss in image quality.

When choosing the right lens, the balance between the required imaging performance, i.e. high resolution with optical image quality, and price is of real interest. A very good imaging performance saves processing time in the further image analysis software and in many cases makes the analysis of even finest structures possible in the first place. If a basic imaging performance and average optical errors are acceptable or if these errors can actually be corrected through image processing, cost-efficient lenses are a better choice.

Whether there are high standards in terms of image quality or a focus on lower costs due to competitive pressure, Basler offers two product lines for both scenarios. The Standard product line stands for the best price/performance ratio and offers good basic performance. The Premium product line offers optimal imaging quality with much higher optical resolution but without neglecting the cost factor.

Both product lines support popular image circles of sensors available in Basler cameras, from 1/2.5" to 1.1", as well as all common focal lengths. The lenses are equipped with a C-mount and can also be conveniently used with CS-mount cameras with the help of an adapter.

For more information, please visit baslerweb.com/basler-lenses

Highlights of the Basler Standard Lenses

- Excellent price/performance ratio
- Solid basic performance
- Suitable for simple vision applications and price-sensitive systems
- Ideal for fast cameras with a low resolution

Highlights of the Basler Premium Lenses

- Designed and tested for the most demanding applications
- Best quality: very high resolution, low distortion, low vignetting
- Optimal for cameras with very high resolutions for the analysis of the smallest structures
- Still cost-optimized

Need Help Selecting the Right Lens for Your Application?

Find the right lens for your Basler camera! Several suitable lenses for your application are suggested to you based on data such as focal length, angle of view, working distance or object size. Test our convenient Lens Selector: baslerweb.com/lens-selector

BASLER LENS	MAXIMUM IMAGE CIRCLE	RESOLUTION [MP]	FOCAL LENGTH [mm]	MOUNT	MAXIMUM RELATIVE APERTURE
Basler Premium Lenses					
Basler Lens C125-0418-5M-P	1/2.5" (7.3 mm)	5	4 mm	C-mount	1:1.8

Basler SLP. Let Your Vision Shine.

Lighting plays a major role in a vision system as it provides the light that, in conjunction with other vision components such as cameras and lenses, ensures the best possible and repeatable image quality in a wide range of applications. With our new Basler SLP camera feature, we offer high quality lighting equipment that is perfectly matched to our most popular camera models and greatly simplifies the set-up and operation of your image processing system.

Reduced Complexity. Simplified Setup. Smooth Operation.

Our unique SLP camera feature will help you save valuable time thanks to the perfect and fully automatic synchronization of camera and lighting. Control your lighting via one single software interface, the pylon Camera Software Suite. Simplify the setup for your vision application, get easy access to the popular strobing and overdrive functions and ensure a smooth operation with Basler SLP. You can choose between two solutions.

Highlights

SLP feature is embedded in pylon Camera Software Suite

- One interface only
- Easy operation

Direct communication between camera and light

- Synchronization of the camera and lighting is fully automatic
- Time savings

Simplified strobing & overdrive

- Longer lifetime or more light intensity achievable even for non-expert users
- Material cost savings realizable for all

For more information, please visit baslerweb.com/lighting

FLEXIBLE SOLUTION

Basler SLP Controller

Easy access to the SLP feature without limiting lighting choices.

- Compatible with most machine vision LED lightings
- Choose the lighting which suits your specific needs
- Remain flexible

EASY SOLUTION

Basler Camera Light Series

Our carefully selected Camera Lights are equipped with an integrated SLP controller for quick and easy access to the SLP feature.

- Preconfigured hardware components
- Everything fits together
- Easy plugging

BASLER SLP CONTROLLER

Basler SLP Strobe Controller 121040

Lighting modes	Continuous; Strobe incl. overdrive mode
Output voltage range	1.5V - 40V
Pulse width	50 μ s - 100 ms
Pulse step size	10 μ s
Max. frequency	200 Hz
Housing Size [L x W x H]	89 mm x 60 mm x 43,5 mm
Conformity	RoHS; CE; FCC

BASLER CAMERA LIGHT SERIES

	Ring Light	Bar Light	Back Light	Flood Light
LED Color	Red, White, Blue	Red, White, Blue	Red, White, Blue	Red, White, Blue
Dimensions	50, 70, 90 mm - OD	100, 150, 200 mm	60 x 60 mm 120 x 120 mm	255 mm
Input voltage	24 VDC (+/-10%)			
Lighting modes	Continuous; Strobe incl. overdrive mode			
Pulse width	50 μ s - 100 ms			
Pulse step size	10 μ s			
Conformity	Lighting: CE, RoHS, IEC 62471 Compliant Product Controller: CE: EN61000-6-2, EN61000-6-4			

LET THERE BE LIGHT. WHENEVER YOU NEED IT.
CAMERA AND LIGHT - EASILY SYNCED WITH BASLER SLP.

Frame Grabber Portfolio – High Performance, Reliable and Flexible

Frame grabbers are the control center for robust high-speed image acquisition and processing in real time on FPGAs including image pre-processing, which minimizes the CPU load. Paired with graphic FPGA programming (VisualApplets), software and appropriate components, our frame grabbers play a vital role in the success of your individual image processing project.

Frame Grabbers and Accessories

Select the right board for your image processing task from one of the most extensive frame grabber ranges in the market.

The boards excel with robust image capture, image pre-processing, minimal latencies and top speeds for all conventional camera interfaces.

We realize solutions in the field of real-time image processing and industrial use. Frame grabbers have powerful FPGA processors to integrate high-quality image preprocessing functions into the firmware (A series).

For programmable frame grabbers (V series), further FPGA resources and larger memory expansion are available for carrying out even complex image processing directly on the frame grabber without loading the CPU. Our extension products offer new opportunities for building new system solutions, and include signal processing boards, image data replicators, image processing library and many more.

VisualApplets

VisualApplets is a highly intuitive tool for graphically programming FPGA processors of image processing hardware, such as frame grabbers, industrial cameras and image processing devices, to realize completely individual image processing alongside standard applications. This solution has been implemented in a variety of fields for numerous industrial applications.

The approach to FPGA programming using data flow models on a GUI makes it easy for hardware as well as software developers and application engineers to intuitively generate applet designs for complex image processing tasks in short order – even with no hardware programming proficiency. All programmed applications are executed on the FPGA in real time.

VisualApplets also provides extension packets consisting of Expert, Embedder, Libraries and Protection functionalities.

Frame Grabber Highlights

- High-performance image acquisition cards for all conventional camera interfaces
- High data rates, bandwidths and resolutions are possible
- Minimal latencies through image processing in real time
- Variant signal controls between frame grabber and surrounding (cameras, lighting, encoder ...)
- No CPU load thanks to effective image pre-processing

VisualApplets Highlights

- Easily create complex applications for FPGAs through graphic dataflow models without hardware programming
- Utilize the image processing library with over 200 operators
- Create own libraries for frequently used image processing steps or import them from existing hardware code
- Protection for your competitive advantage is already built in

For more information and a full model overview, please visit baslerweb.com/framegrabbers

Tested and Qualified PC Cards for Various Interfaces – Rely on Our Expertise

With PC cards you can flexibly connect cameras to the host PC and obtain high-performance and reliable image acquisition via your optimal interface. Our PC cards are tested over the product life cycle with common operating conditions and against operating system updates. The advantage is a smooth integration of tested and qualified components into the image processing system and at the same time a noticeable cost advantage.

For more information, please visit baslerweb.com/pccards

GigE Interface Cards

GigE interface cards are required when the PC used has only a single LAN port, which is occupied by (for example) the machine controller, or does not have a Power over Ethernet (PoE) function for power supply. Using the GigE interface cards, a single cable solution can be implemented using the PoE function if required, thus enabling a multi-camera system to be developed with reduced system complexity. Depending on the application scenario and the camera used, our portfolio offers corresponding 1GigE interface cards with or without PoE function as well as 10GigE interface cards.

Highlights

- Technology for receiving image data and operating several cameras on one vision PC for the most demanding applications
- Performance optimizations using our pylon SDK and the Basler Performance Driver
- Harmonized for Basler cameras and cable solutions
- Same MAC address space as Basler cameras for easier network management

Basler Standard GigE Interface Cards

- 1GigE with 1, 2 or 4 ports
- 10GigE with 1 port
- Cost-optimized product design

Basler Premium GigE Interface Cards

- 1GigE with 1, 2 or 4 ports with PoE feature
- Ideal for single cable solutions with low installation effort

GIGE INTERFACE CARDS	NO. OF PORTS	POE (IEEE 802.3AF) CAPABLE	PTP (IEEE 1588) CAPABLE
Basler Standard GigE Interface Cards			
Basler 10GigE Interface Card, 1 Port	1	no	yes
Basler GigE Interface Card, 1 Port	1	no	yes
Basler GigE Interface Card, 2 Port	2	no	yes
Basler GigE Interface Card, 4 Port	4	no	yes
Basler Premium GigE Interface Cards			
Basler GigE Interface Card, 1 Port PoE	1	yes	yes
Basler GigE Interface Card, 2 Port PoE	2	yes	yes
Basler GigE Interface Card, 4 Port PoE	4	yes	yes

USB 3.0 Interface Cards

With the USB 3.0 interface cards with 2 or 4 ports, you no longer have to worry about faulty drivers or operating system updates. Frequently occurring problems are also a thing of the past, such as when the PC's host controller has already been occupied with additional peripherals and conflicts occur on the data bus, which in turn lead to data errors or image loss. Furthermore, our vision components are available on the market longer than the chipsets used in common PCs.

USB 3.0 INTERFACE CARDS	NO. OF PORTS	CHIPSET	PCI-E CONNECTION
USB 3.0 Interface Card PCIe, Fresco FL1100, 1HC, x1, 4 Ports	4	Fresco FL1100	PCIe x1 Gen2
USB 3.0 Interface Card PCIe, Fresco FL1100, 4HC, x4, 4 Ports	4	Fresco FL1100	PCIe x4 Gen2
USB 3.0 Interface Card PCIe, Ren, 1 HC, x1, SATA, 2 Ports	2	Renesas	PCIe x1 Gen2
USB 3.0 Interface Card PCIe, Renesas, 1 HC, x1, 2 Ports	2	Renesas	PCIe x1 Gen2
USB 3.0 Interface Card PCIe, Renesas, 2HC, x4, 2 Ports	2	Renesas	PCIe x4 Gen2

CXP-12 Interface Card

The CXP-12 interface card is based on the PCIe Gen 3.0 industry standard which delivers high speed access to the memory of the host computer. It enables a bandwidth of up to 12.5 Gbps per transmission channel and seamless plug and play integration of our boost cameras via the pylon Camera Software Suite. This eliminates the need to install and program an additional SDK for the interface card: simply plug in the card and start image acquisition. All in all, the CXP-12 interface cards significantly reduce both system costs and configuration effort. Basler CXP-12 interface cards are only available as part of a boost bundle or evaluation kit. Please see [page 20](#) for detailed information on bundles and evaluation kits.

Highlights

- CoaXPress (CXP-12) single channel
- 3260 MB/s bandwidth via PCIe Gen 3 x4 bus
- Low-profile
- Passive heatsink
- Several trigger scenarios through front GPIO
- Fully harmonized with Basler boost cameras
- Simply install and start image acquisition via pylon SDK

CXP-12 INTERFACE CARD 1C	
Data Rate	3260 MB/s
Interface Host	PCIe 3 x4
On-Board Memory	1 GB DDR4-RAM
Size (L × W × H)	PCIe low profile card (167.65 mm × 68.9 mm × 18 mm)
Camera Interface	1x Micro-BNC (HD-BNC)
Power Supply	PCIe 6-pin connector 12 V (required for PoCXP)
Trigger Connector	D-Sub Micro-D 15pin
Typical Weight	180 g
Software	Basler pylon Camera Software Suite (version 6.1 or higher)
Operating System	Windows, Linux (64-Bit)
Conformity	CE, RoHS, WEEE, REACH, GenICam, EAC ¹ , PCB compliant with UL 94 V-0

¹ Only for selected models, please refer to our website [baslerweb.com/boost-bundle](https://www.baslerweb.com/boost-bundle) for detailed information.

We maintain a worldwide network of subsidiaries, offices and distributors to ensure that Basler customers always have a knowledgeable contact person in their area.
